2. South Dakota and Washington have the least number of wheat symbols, so the least amount of wheat acreage was planted in South Dakota and Washington.

4. Kansas is represented by 7.5 wheat symbols, and each symbol represents 1 million acres, so there were approximately 7.5(1 million) = 7.5 million or 7,500,000 acres of wheat planted in Kansas.

6. Each wheat symbol represents 1 million acres, so look for any states that have more than $\frac{7 \text{ million}}{1 \text{ million}} = 7$ wheat symbols. Kansas has more than 7 wheat symbols, so Kansas plants more than 7,000,000 acres of wheat.

8. Colorado has 2.5 wheat symbols, while Washington has 2 wheat symbols. Since Colorado has more wheat symbols, Colorado plants more wheat than Washington.

10. 2012 has 5.5 flames and each flame represents 12,000 wildfires, so there were approximately 5.5(12,000) = 66,000 wildfires in 2012.

12. Since each fire represents 12,000 wildfires, look for the years that have more than $\frac{72,000}{12,000} = 6$ flames. The years 2011 and 2016 had more than 72,000 wildfires.

28. The bar corresponding to Jakarta, Indonesia has length about 31.5 and the bar corresponding to Delhi, India has length about 26.5. Thus, Jakarta, Indonesia is about 31.5 − 26.5 = 5 million larger than Delhi, India.

36. 9 of the adults drive 200–249 miles per week and 21 of the adults drive 250–299 miles per week, so 9 + 21 = 30 of the adults drive 200 miles or more per week.

38. 9 of the adults drive 150–199 miles per week and 9 of the adults drive 200–249 miles per week, so 9 + 9 = 18 of the adults drive 150–249 miles per week.

Copyright © 2020 Pearson Education, Inc.

Introductory Algebra 6th edition Martin Gay Solutions Manual

40. 29 of the adults drive 0–49 miles per week and 17 of the adults drive 50–99 miles per week, so 29 – 17 = 12 more adults drive 0–49 miles per week than 50–99 miles per week.

42. 17 of the 100 adults surveyed drive 50–99 miles per week, so the ratio is $\frac{17}{100}$.

44. The shortest bar in the histogram represents the 85 plus age range, so the 85 plus age range will be the smallest population group in 2020.

46. The population of 45-to-64 year olds is expected to be 84 million in 2020.

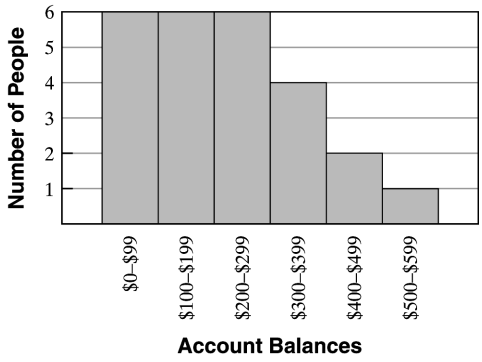

48. The population of 5-to-19 year olds is expected to be 66 million in 2020.

50. The population of 20-to-44 year olds is expected to be 109 million and the population of 45-to-64 year olds is expected to be 84 million, so 109 – 84 = 25 million more 20-to-44 year olds are expected to be there than 45-64 year olds in 2020.

68. The graph decreases between 2011 and 2013, so the average number of goals per game decreased from 2011 to 2013.

70. The dots for 2009, 2011, and 2017 are above the 8-level, so the average number of goals per game was greater than 8 in 2009, 2011, and 2017.

South America is 6,840,000 square miles.

84. Europe accounts for 7% of the land on Earth.
7% of $57{,}000{,}000 = 0.07 \cdot 57{,}000{,}000$

Europe is 3,990,000 square miles.

86. Add the percent for nonfiction (25%) to the percent for reference (17%).
$25\% + 17\% = 42\%$
Thus, 42% of books are nonfiction or reference.

90. Reference accounts for 17% of the books.
17% of $125{,}600 = 0.17 \cdot 125{,}600 = 21{,}352$
The library has 21,352 reference books.

92. Adult's fiction accounts for 33% of the books.
33% of $125{,}600 = 0.33 \cdot 125{,}600 = 41{,}448$
The library has 41,448 adult fiction books.

94. Nonfiction or other accounts for
$25\% + 3\% = 28\%$ of the books.
28% of $125{,}600 = 0.28 \cdot 125{,}600 = 35{,}168$
The library has 35,168 nonfiction or other books

96. The point on the low temperature graph corresponding to Thursday is 74, so the low temperature reading on Thursday was 74°F.

98. The highest point on the graph of high temperature corresponds to Tuesday. The high temperature on Tuesday was 86°F.

100. The difference between the graphs is the least for Friday. The high temperature was 76°F and the low temperature was 70°F, so the difference is $76 - 70 = 6$°F.

45. Midwest has $3\frac{1}{2}$ houses, and each house represents 50,000 homes, so there were $3\frac{1}{2}(50,000) = 175,000$ new homes constructed in the Midwest.

46. South has 12 houses, and each house represents 50,000 homes, so there were 12(50,000) = 600,000 new homes constructed in the South.

47. South has the greatest number of houses, so the most new homes constructed were in the South.

48. Northeast has the least number of houses, so the fewest new homes constructed were in the Northeast.

49. Each house represents 50,000 homes, so look for the regions with $\frac{250,000}{50,000} = 5$ or more houses.
The South and West had 250,000 or more new homes constructed.

50. Each house represents 50,000 homes, so look for the regions with fewer than $\frac{200,000}{50,000} = 4$ houses. The Northeast and Midwest had fewer than 200,000 new homes constructed.

51. The height of the bar representing 2010 is 30. Thus, approximately 30% of persons completed four or more years of college in 2010.

52. The tallest bar corresponds to 2017. Thus, the greatest percent of persons completing four or more years of college was in 2017.

53. The bars whose height is at a level of 20 or more are 1990, 2000, 2010, and 2017. Thus, 20% or more persons completed four or more years of college in 1990, 2000, 2010, and 2017.

55. The point on the graph corresponding to 2012 is about 962. Thus, there were approximately 962 medals awarded at the Summer Olympics in 2012.

56. The point on the graph corresponding to 2000 is about 927. Thus, there were approximately 927 medals awarded at the Summer Olympics in 2000.

57. The point on the graph corresponding to 2008 is about 958. Thus, there were approximately 958 medals awarded at the Summer Olympics in 2008.

58. The point on the graph corresponding to 1996 is about 842. Thus, there were approximately 842 medals awarded at the Summer Olympics in 1996.

61. The height of the bar corresponding to 41–45 is 1. Thus, 1 employee works 41–45 hours per week.

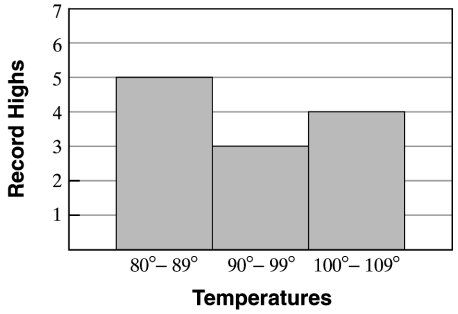

62. The height of the bar corresponding to 21–25 is 4. Thus, 4 employees work 21–25 hours per week.

63. Add the heights of the bars corresponding to 16–20, 21–25, and 26–30. Thus, 6 + 4 + 8 = 18 employees work 30 hours or less per week.

64. Add the heights of the bars corresponding to 36–40 and 41–45. Thus, 8 + 1 = 9 employees work 36 or more hours per week.

69. The largest sector corresponds to the category "Mortgage payment," thus the largest budget item is mortgage payment.

70. The smallest sector corresponds to the category "Utilities," thus the smallest budget item is utilities.

71. Add the amounts for mortgage payment and utilities. Thus, \$975 + \$250 = \$1225 is budgeted for the mortgage payment and utilities.

72. Add the amounts for savings and contributions. Thus, \$400 + \$300 = \$700 is budgeted for savings and contributions.

73. $\dfrac{\text{mortgage payment}}{\text{total}} = \dfrac{\$975}{\$4000} = \dfrac{39 \cdot 25}{160 \cdot 25} = \dfrac{39}{160}$

The ratio is $\dfrac{39}{160}$.

74. $\dfrac{\text{food}}{\text{total}} = \dfrac{\$700}{\$4000} = \dfrac{7 \cdot 100}{40 \cdot 100} = \dfrac{7}{40}$

The ratio is $\dfrac{7}{40}$.

\$225 was collected during the second week.

32. Week 3 has more dollar symbols than any other week, so the most money was collected during week 3. There are 7 symbols for week 3, each representing \$50, so the amount collected in week 3 was $7 \cdot \$50 = \$350$.

33. The number of dollar symbols for all 5 weeks is $3 + 4.5 + 7 + 5.5 + 2 = 22$. Each symbol represents \$50, so the total amount collected was $22 \cdot \$50 = \$1100$.

34. The bars for June, August, and September extend above the 9 cm level, so the normal amount of precipitation is more than 9 cm during those months.

35. The shortest bar corresponds to February. The normal monthly precipitation in February in Chicago is 3 centimeters.

36. The tops of the bars for March and November are at the 7 cm level, so 7 cm of precipitation normally occurs in those months.

37. The point on the graph corresponding to 2014 is at about 1.6. Thus, the annual inflation rate in 2014 was about 1.6%.

38. The line graph is above the 3 level for 2008 and 2011. Thus the inflation rate was greater than 3% in 2008 and 2011.

39. Look for the years where the line graph is decreasing. During 2008–2009, 2011–2012, 2012–2013, and 2014–2015, the inflation rate was decreasing.

40. 85 of the 200 people prefer rock music, so the ratio is $\frac{85}{200} = \frac{17}{40}$.

41. 62 people prefer country music, and 44 prefer jazz, so the ratio is $\frac{62}{44} = \frac{31}{22}$.

42. The sector corresponding to under 18 is 22%.

$$22\% \text{ of } 335 \text{ million} = 0.22 \cdot 335 \text{ million}$$
$$= 73.7 \text{ million}$$

Thus, about 74 million people are expected to be in the under 18 age group in 2020.

43. The sector corresponding 25–44 is 27%.

$$27\% \text{ of } 335 \text{ million} = 0.27 \cdot 335 \text{ million}$$
$$= 90.45 \text{ million.}$$

Thus, about 90 million people are expected to be in the 25–44 age group in 2020.

44. The top of the bar marked $5'8" - 5'11"$ is halfway between the levels marked 8 and 10, so 9 students are $5'8" - 5'11"$ tall.

45. 5 students are $5'0" - 5'3"$ tall and 6 students are $5'4" - 5'7"$ tall, so $5 + 6 = 11$ students are $5'7"$ or shorter.
