SHORT ANSWER. Write the word or phrase that best completes each statement or answers the question.

48) A company manufactures two products. For $1.00 worth of product A, the company spends $0.50 on materials, $0.20 on labor, and $0.10 on overhead. For $1.00 worth of product B, the company spends $0.40 on materials, $0.20 on labor, and $0.10 on overhead. Let

$$\mathbf{a} = \begin{bmatrix} 0.50 \\ 0.20 \\ 0.10 \end{bmatrix} \text{ and } \mathbf{b} = \begin{bmatrix} 0.40 \\ 0.20 \\ 0.10 \end{bmatrix}.$$

Then $\mathbf{a}$ and $\mathbf{b}$ represent the "costs per dollar of income" for the two products.
Evaluate $500\mathbf{a} + 100\mathbf{b}$ and give an economic interpretation of the result.

Answer: $500\mathbf{a} + 100\mathbf{b} = \begin{bmatrix} 290 \\ 120 \\ 60 \end{bmatrix}$

$500\mathbf{a} + 100\mathbf{b}$ lists the various costs for producing $500 worth of product A and $100 worth of product B, namely $290 for materials, $120 for labor, and $60 for overhead.

49) A company manufactures two products. For $1.00 worth of product A, the company spends $0.45 on materials, $0.20 on labor, and $0.10 on overhead. For $1.00 worth of product B, the company spends $0.40 on materials, $0.20 on labor, and $0.10 on overhead. Let

$$\mathbf{a} = \begin{bmatrix} 0.45 \\ 0.20 \\ 0.10 \end{bmatrix} \text{ and } \mathbf{b} = \begin{bmatrix} 0.40 \\ 0.20 \\ 0.10 \end{bmatrix}.$$

Then **a** and **b** represent the "costs per dollar of income" for the two products.
Suppose the company manufactures x_1 dollars worth of product A and x_2 dollars worth of product B and that its total costs for materials are $205, its total costs for labor are $100, and its total costs for overhead are $50.
Determine x_1 and x_2, the dollars worth of each product produced. Include a vector equation as part of your solution.

Answer: $x_1\mathbf{a} + x_2\mathbf{b} = \begin{bmatrix} 205 \\ 100 \\ 50 \end{bmatrix}$
