SKU: 9780136921653-TEST-BANK

Using MIS, 12e **(Kroenke/Boyle)**
Chapter 1 The Importance of MIS

1) _____ states that the number of transistors per square inch on an integrated chip doubles every 18 months.
A) Nielsen's Law
B) Faraday's Law
C) Moore's Law
D) Newton's Law
E) Metcalfe's Law
Answer: C
Diff: 1 Page Ref: 6
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

2) According to Moore's Law, the _____.
A) price of an integrated chip reduces once in 18 months
B) performance of each transistor on a square inch of an integrated chip doubles every year
C) number of transistors per square inch on an integrated chip doubles every 18 months
D) density of a transistor decreases every year
E) rate of innovation increases exponentially
Answer: C
Diff: 2 Page Ref: 6
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

3) _____ states that network connection speeds for high-end users will increase by 50 percent per year.
A) Nielsen's Law
B) Kryder's Law
C) Moore's Law
D) Bell's Law
E) Metcalfe's Law
Answer: A
Diff: 2 Page Ref: 8
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

4) Which of the following ratios has fallen as a result of Moore's Law?
A) price/performance
B) demand/supply
C) profit/loss
D) debt/equity
E) price/earnings
Answer: A
Diff: 1 Page Ref: 7
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

5) In 1972, computer scientist _____ recognized that digital devices would change the world as they evolved and became widely used.
A) Gordon Bell
B) Robert Metcalfe
C) Gordon Moore
D) Jakob Nielsen
E) Sam Flynn
Answer: A
Diff: 1 Page Ref: 6
AACSB: Information Technology
Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

6) _____ states that the value of a network is equal to the square of the number of users connected to it.
A) Moore's Law
B) Metcalfe's Law
C) Bell's Law
D) Nielsen's Law
E) Flynn's Law
Answer: B
Diff: 1 Page Ref: 7
AACSB: Information Technology
Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

7) Google's Project Loon is a major effort to _____.
A) decrease the size of storage devices, while increasing their capacity
B) facilitate the use of Internet on submarines, while they are submerged
C) promote the use of virtual machines, that operate on voice command
D) bring Internet access to everyone using a network of inflated balloons
E) reduce the rate of decay in magnetic disks
Answer: D
Diff: 2 Page Ref: 7
AACSB: Information Technology
Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

8) According to Bell's Law, _____ will evolve so quickly they will enable new platforms every 10 years.
A) systems thinking
B) human interactions
C) digital devices
D) television
E) technology companies
Answer: C
Diff: 2 Page Ref: 6
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

9) Because of Moore's Law, the _____ of data processing is approaching zero.
A) cost
B) power
C) speed
D) use
E) applications
Answer: A
Diff: 1 Page Ref: 7
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure

10) A primary metric for social media companies is _____.
A) revenue
B) the number of monthly active users
C) the number of ads shown to users
D) the total number of users
E) how much it costs the company to maintain social media connections
Answer: B
Diff: 1 Page Ref: 7
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

11) _____ states the storage density on magnetic disks is increasing at an exponential rate.
A) Nielsen's Law
B) Faraday's Law
C) Moore's Law
D) Kryder's Law
E) Metcalfe's Law
Answer: D
Diff: 1 Page Ref: 8
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?

18) The hottest jobs are found in marketing companies.
Answer: FALSE
Diff: 1 Page Ref: 5
AACSB: Information Technology
Course LO: Discuss the key issues involved in managing the components of IT infrastructure
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

19) Discuss the Digital Revolution.
Answer: The Digital Revolution was the conversion from mechanical and analog devices to digital devices. This shift to digital devices meant monumental changes for companies, individuals, and the society as a whole. The problem was, people couldn't really understand how, or even why, this shift was going to affect them. Much like people today, they based their future projections on past events. They knew factories, bureaucracies, mass production, and operational efficiency. But this knowledge didn't prepare them for the changes that were coming.
The Digital Revolution didn't just mean that new "digital" equipment was replacing old mechanical, or analog, equipment. These new digital devices could now be connected to other digital devices and share data among themselves. They could also work faster as processor speed increased.
Diff: 2 Page Ref: 5
AACSB: Information Technology
Course LO: Discuss the role of information systems in supporting business processes
Learning Objective: Q1-1: Why is introduction to MIS the most important class in the business school?
Classification: Concept

20) State Nielsen's Law. What is the implication of Nielsen's Law for managers?
Answer: According to Nielsen's Law, "network connection speeds for high-end users will increase by 50 percent per year." Because of this law, the types of services and applications that can be provided over networks (i.e. the Internet) have changed radically. Therefore, it is important for managers to realize that, because of Nielsen's Law, networks will become faster, new companies, new products, and new platforms will emerge.

21) _____ is(are) most likely to be outsourced to the lowest bidder.
A) Ability to experiment
B) Routine skills
C) Ability to collaborate
D) Abstract reasoning skill
E) Systems thinking
Answer: B
Diff: 2 Page Ref: 9
AACSB: Analytical Thinking
Course LO: Explain how IS can be used to gain and sustain competitive advantage
Learning Objective: Q1-2: How will MIS affect you?
Classification: Concept

22) Which of the following is categorized as a nonroutine cognitive skill?
A) symbolic thinking
B) marketing knowledge
C) tax accounting
D) systems thinking
E) data entry
Answer: D
Diff: 1 Page Ref: 10
AACSB: Analytical Thinking
Course LO: Explain how IS can be used to gain and sustain competitive advantage
Learning Objective: Q1-2: How will MIS affect you?
Classification: Concept

23) Dallas is an analyst at an online retailer. He is great at creating representative diagrams showing the relationships between customer purchases, billing, and shipment. This indicates that he has _____ skills.
A) abstract reasoning
B) collaborative
C) experimental
D) systems thinking
E) spatial intelligence
Answer: A
Diff: 3 Page Ref: 10

24) Abstract reasoning is the ability to _____.
A) develop ideas and plans with others when performing tasks
B) make and manipulate models
C) act quickly on a problem
D) provide and receive critical feedback
E) identify the crux of an argument
Answer: B
Diff: 1 Page Ref: 10
AACSB: Information Technology
Course LO: Explain how IS can be used to gain and sustain competitive advantage
Learning Objective: Q1-2: How will MIS affect you?
Classification: Concept

25) _____ is the ability to model the components of a system, to connect the inputs and outputs among those components into a sensible whole that reflects the structure and dynamics of the phenomenon observed.
A) Abstract reasoning
B) Systems thinking
C) Collaboration
D) Experimentation
E) Function modeling
Answer: B

37) According to The U.S. Bureau of Labor Statistics, the demand for information systems and business jobs are low and future wage growth appears stagnant.
Answer: FALSE
Diff: 1 Page Ref: 12
AACSB: Analytical Thinking
Course LO: Explain how IS can be used to gain and sustain competitive advantage
Learning Objective: Q1-2: How will MIS affect you?
Classification: Concept

38) What job prospects are available for professionals who know how to use information systems (ISs)?
Answer: Information systems and computer technology provide job and wage benefits beyond just IS professionals. As the price of computer technology plummets, the value of jobs that benefit from it increases dramatically. For example, plentiful, high-paying jobs are available to business professionals who know how to use information systems to improve business process quality, or those who know how to interpret data mining results for improved marketing, or those who know how to use emerging technology like 3D printing to create new products and address new markets.
Diff: 3 Page Ref: 13
AACSB: Information Technology
Course LO: Explain how IS can be used to gain and sustain competitive advantage
Learning Objective: Q1-2: How will MIS affect you?
Classification: Concept

39) Explain the four nonroutine cognitive skills that are key to a successful career today.
Answer: The four nonroutine cognitive skills identified as critical for organizations in the current scenario are as follows:
(1) Abstract reasoning—the ability to make and manipulate models.
(2) Systems thinking—the ability to model the components of a system, to connect the inputs and outputs among those components into a sensible whole that reflects the structure and dynamics of the phenomenon observed.
(3) Collaboration—the activity of two or more people working together to achieve a common goal, result, or work product.
(4) Ability to experiment—making a reasoned analysis of an opportunity, envisioning potential solutions, evaluating those possibilities, and developing the most promising ones, consistent with the resources you have.
Diff: 3 Page Ref: 10

40) Why does the author feel this course is the most important course in the business school?
Answer:
1. It will give you the background you need to assess, evaluate, and apply emerging information systems technology to business.
2. It can give you the ultimate in job security—marketable skills—by helping you learn abstraction, systems thinking, collaboration, and experimentation.
3. Many well-paid MIS-related jobs are in high demand.

57) Define the terms system, information system, and management information system.
Answer: A system is a group of components that interact to achieve some purpose. An information system (IS) is a group of components that interact to produce information. A management information system is defined as a system that helps organizations achieve their strategies.
Diff: 2 Page Ref: 14
AACSB: Information Technology
Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-3: What is MIS?
Classification: Concept

58) List and briefly explain the five-component model of an information system with examples.
Answer: The five components described in the model are: computer hardware, software, data, procedures, and people. These five components are present in every information system, from the simplest to the most complex. For example, when one uses a computer to write a class report, he/she is using hardware (the computer, storage disk, keyboard, and monitor), software (Word, WordPerfect, or some other word-processing program), data (the words, sentences, and paragraphs in the report), procedures (the methods used to start the program, enter the report, print it, and save and back up the file), and people (the user).
Diff: 3 Page Ref: 14
AACSB: Information Technology
Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-3: What is MIS?
Classification: Concept

59) List the three key elements of management information systems.
Answer: Management and use, information systems, and strategies.
Diff: 3 Page Ref: 14
AACSB: Information Technology
Course LO: Discuss the role of information systems in supporting business processes
Learning Objective: Q1-3: What is MIS?
Classification: Concept

60) What is the difference between information systems (IS) and information technology (IT)?
Answer: An information system (IS) is an assembly of hardware, software, data, procedures, and people that produces information. In contrast, information technology (IT) refers to the products, methods, inventions, and standards used for the purpose of producing information.
Diff: 2 Page Ref: 14

87) Which is the most important component of an information system? Why?
Answer: People are part of every information system that they use. The user's mind and thinking are not merely a component of the information systems they use; they are the most important component. This is so because, even if users have the perfect information system, if they do not know what to do with the data that it produces, they are wasting both their time and money. The quality of users' thinking is what determines the quality of the information that is produced.

88) Explain how the five components of an information system are arranged in terms of ease of change and organizational disruption.
Answer: The five components of the information systems framework are: computer hardware, software, data, procedures, and people. The five components are arranged in order of ease of change and the amount of organizational disruption. It is usually a simple matter to order new hardware and install it. Obtaining or developing new programs is more difficult. Creating new databases or changing the structure of existing databases is still more difficult. Changing procedures, requiring people to work in new ways, is even more difficult. Finally, changing personnel responsibilities and reporting relationships and hiring and terminating employees are both very difficult and very disruptive to an organization.

99) Discuss the common definitions of information.
Answer: The most common definition of information is that information is knowledge derived from data, whereas data is defined as recorded facts or figures. Another common definition is that information is data presented in a meaningful context. A third definition of information that one often hears is that information is processed data, or sometimes, information is data processed by summing, ordering, averaging, grouping, comparing, or other similar operations. The fundamental idea of this definition is that individuals do something to data to produce information.

Learning Objective: Q1-5: What is information?
Classification: Concept

100) Explain the relation between data and information.
Answer: The relation between data and information can be understood with the help of a graph. The graph is data that humans perceive, and from that perception conceive information. In short, if it's on a piece of paper or on a digital screen, it's data. If it's in the mind of a human, it's information. The quality of thinking, or ability to conceive information from data, is determined by one's cognitive skills. The data is just the data; the information conceived from it is the value that one adds to the information system. People have different perceptions and points of view, not surprisingly, then, they will conceive different information from the same data.

120) Explain why data accuracy is crucial to the success of an information system.
Answer: Good information is conceived from accurate, correct, and complete data that has been processed correctly as expected. The IS function can develop a bad reputation in the organization if a system is known to produce inaccurate data. In such a case, the information system becomes a waste of time and money as users develop workarounds to avoid the inaccurate data.

Course LO: Describe the components of an information system (IS)
Learning Objective: Q1-6: What are necessary data characteristics?
Classification: Concept

121) Explain the concept of "just barely sufficient" data.
Answer: Data needs to be sufficient for the purpose for which it is generated, but just barely so. We are inundated with data; one of the critical decisions that each of us has to make each day is what data to ignore. The higher one rises into management, the more data one will be given, and because there is only so much time, the more data one will need to ignore. So, data should be sufficient, but just barely.

122) Which of the following statements is TRUE about the changes and developments foreseen by the year 2031?
A) Smartphones may fade away.
B) Desktop and portable computers will increase in popularity.
C) Processing image data would be difficult.
D) Mobile devices would have to be charged multiple times a day.
E) Mainframes will overtake servers.
Answer: A

AACSB: Analytical Thinking
Course LO: Discuss the role of information systems in supporting business processes
Learning Objective: Q1-7: 2031?
Classification: Concept

125) What are some potential downsides of advances in technology in the future?
Answer: By 2031, privacy may be increasingly difficult to maintain. Your data will be collected by new kinds of apps, flowing through the cloud, and be packaged for sale by companies providing "free" services. Social relationships may suffer as well. We may become less connected to people as we become more connected to systems.
