Chapter 2
Investing and Financing Decisions and the Accounting System

ANSWERS TO QUESTIONS

1. The primary objective of financial reporting for external users is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources to the entity. These users are expected to have a reasonable understanding of accounting concepts and procedures. Usually, they are interested in information to assist them in projecting future cash inflows and outflows of a business.

2. (a) An asset is a probable future economic benefit owned or controlled by the entity as a result of past transactions.

   (b) A current asset is an asset that will be used or turned into cash within one year; inventory is always considered a current asset regardless of how long it takes to produce and sell the inventory.

   (c) A liability is a probable future sacrifice of economic benefits of the entity arising from present obligations as a result of a past transaction.

   (d) A current liability is a liability that will be settled by providing cash, goods, or other services within the coming year.

   (e) Additional paid-in capital is the owner-provided financing to the business that represents the excess of the amount received when the common stock was issued over the par value of the common stock.

   (f) Retained earnings are the cumulative earnings of a company that are not distributed to the owners and are reinvested in the business.

Financial Accounting 10th edition Libby Solutions Manual

3. (a) The separate entity assumption requires that business transactions are separate from the transactions of the owners. For example, the purchase of a truck by the owner for personal use is not recorded as an asset of the business.

(b) The monetary unit assumption requires information to be reported in the national monetary unit without any adjustment for changes in purchasing power. That means that each business will account for and report its financial results primarily in terms of the national monetary unit, such as Yen in Japan and Australian dollars in Australia.

(c) Under the going concern assumption, businesses are assumed to operate into the foreseeable future. That is, they are not expected to liquidate.

(d) Historical cost is a measurement model that requires assets to be recorded at the cash-equivalent cost on the date of the transaction. Cash-equivalent cost is the cash paid plus the dollar value of all noncash considerations.

4. Accounting assumptions are necessary because they reflect the scope of accounting and the expectations that set certain limits on the way accounting information is reported.

5. An account is a standardized format used by organizations to accumulate the dollar effects of transactions on each financial statement item. Accounts are necessary to keep track of all increases and decreases in the fundamental accounting model.

6. The fundamental accounting model is provided by the equation:

Assets = Liabilities + Stockholders' Equity

7. A business transaction is (a) an exchange of resources (assets) and obligations (debts) between a business and one or more outside parties, and (b) certain events that directly affect the entity such as the use over time of rent that was paid prior to occupying space and the wearing out of equipment used to operate the business. An example of the first situation is (a) the sale of goods or services. An example of the second situation is (b) the use of insurance paid prior to coverage.

8. Debit is the left side of a T-account and credit is the right side of a T-account. A debit is an increase in assets and a decrease in liabilities and stockholders' equity. A credit is the opposite -- a decrease in assets and an increase in liabilities and stockholders' equity.

Financial Accounting 10th edition Libby Solutions Manual

9. Transaction analysis is the process of studying a transaction to determine its economic effect on the entity in terms of the accounting equation:

Assets = Liabilities + Stockholders' Equity

The two principles underlying the process are:

* every transaction affects at least two accounts.
* the accounting equation must remain in balance after each transaction.

The two steps in transaction analysis are:

(1) identify and classify accounts and the direction and amount of the effects.

(2) determine that the accounting equation (A = L + SE) remains in balance.

10. The equalities in accounting are:

(a) Assets = Liabilities + Stockholders' Equity

(b) Debits = Credits

11. The journal entry is a method for expressing the effects of a transaction on accounts in a debits-equal-credits format. The title of the account(s) to be debited is (are) listed first and the title of the account(s) to be credited is (are) listed underneath the debited accounts. The debited amounts are placed in a left-hand column and the credited amounts are placed in a right-hand column.

12. The T-account is a tool for summarizing transaction effects for each account, determining balances, and drawing inferences about a company's activities. It is a simplified representation of a ledger account with a debit column on the left and a credit column on the right.

13. The current ratio is computed as current assets divided by current liabilities. It measures a company's liquidity -- the ability of the company to pay its short-term obligations with current assets. A ratio above 1.0 normally suggests that the company has sufficient current assets to settle short-term obligations. Sophisticated cash management systems allow many companies to minimize funds invested in current assets and have a current ratio below 1.0. However, a ratio that is too high in relation to other competitors in the industry may indicate inefficient use of resources.

14. Investing activities on the statement of cash flows include the buying and selling of productive assets and investments. Financing activities include borrowing and repaying debt, issuing and repurchasing stock, and paying dividends.

* Due to the nature of these cases and projects, it is very difficult to estimate the amount of time students will need to complete the assignment. As with any open-ended project, it is possible for students to devote a large amount of time to these assignments. While students often benefit from the extra effort, we find that some become frustrated by the perceived difficulty of the task. You can reduce student frustration and anxiety by making your expectations clear. For example, when our goal is to sharpen research skills, we devote class time discussing research strategies. When we want the students to focus on a real accounting issue, we offer suggestions about possible companies or industries.

M2–11.

JonesSpa Corporation
Balance Sheet
At January 31

Assets		***Liabilities***	
Current assets:		*Current liabilities:*	
Cash	$ 16,400	Notes payable	$ 43,000
Notes receivable	11,000	Dividends payable	2,000
Total current assets	27,400	Total current liabilities	45,000
		Stockholders' Equity	
Equipment	30,100	Common stock	1,010
		Additional paid-in capital	3,490
		Retained earnings	8,000
		Total stockholders' equity	12,500
		Total Liabilities &	
Total Assets	$ 57,500	***Stockholders' Equity***	$ 57,500

M2–12.

Current Ratio =

	Current Assets	÷	**Current Liabilities**		
2016	280,000	÷	155,000	=	1.806
2017	270,000	÷	250,000	=	1.080

This ratio indicates that Sal's Taco Company has sufficient current assets to settle current liabilities, but that the ratio has also decreased between 2016 and 2017 by .726 (40%). Sal's Taco Company ratio of 1.080 is lower than Chipotle's 2017 ratio of 1.944, indicating that Sal's Taco Company appears to have weaker liquidity than Chipotle. Because the restaurant industry typically has high cash inflows from customers, both companies can maintain a lower current ratio.

M2–13.

(a) F

(b) I

(c) F

(d) I

Transaction (e) for the declaration of cash dividends creates an obligation. Thus, it would not be included on the statement of cash flows because no cash was paid in January.

(i)	Intangibles (A) *[or Patents]*	Cash (A) and Notes payable *(current)* (L)
(j)	*No exchange transaction*	—
(k)	Investments (A)	Cash (A)
(l)	Cash (A)	Notes payable *(current)* (L)
(m)	Notes payable (L) *[Received a reduction in its promise to pay]*	Cash (A)

Req. 2

The truck in (b) would be recorded as an asset of $18,000. The land in (h) would be recorded as an asset of $50,000. These are applications of the historical cost principle.

Req. 3

The agreement in (c) involves no exchange or receipt of cash, goods, or services and thus is not a transaction. Since transaction (j) occurs between the owner and others, there is no effect on the business because of the separate entity assumption.

E2–11.

Req. 1

Transaction	*Brief Explanation*
1	Issued common stock to shareholders for $15,000 cash. (FastTrack Sports Inc. is a corporation because it issues stock. Par value of the stock was $0.10 per share because $1,500 common stock amount divided by 15,000 shares issued equals $0.10 per share).
2	Borrowed $75,000 cash and signed a short-term note for this amount.
3	Purchased land for $16,000; paid $5,000 cash and gave an $11,000 short-term note payable for the balance.
4	Loaned $4,000 cash; borrower signed a short-term note for this amount (Note Receivable).
5	Purchased store fixtures for $9,500 cash.
6	Purchased land for $4,000; paid for by signing a short-term note.

Req. 2

E2–12.

Req. 1

Transaction	*Brief Explanation*
1	Issued common stock to shareholders for $45,000 cash. (Volz Cleaning is a corporation because it issues stock. Par value is $2.00 per share; $6,000 common stock amount divided by 3,000 shares issued equals $2.00 per share).
2	Purchased a delivery truck for $35,000; paid $8,000 cash and gave a $27,000 long-term note payable for the balance.
3	Loaned $2,000 cash; borrower signed a short-term note for this amount.
4	Purchased short-term investments for $7,000 cash.
5	Sold short-term investments at cost for $3,000 cash.
6	Purchased computer equipment for $4,000 cash.

Financial Accounting 10th edition Libby Solutions Manual

E2–15. (continued)

Req. 6

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$11,200+\$1,000}{\$2,200} = \frac{\$12,200}{\$2,200} = \mathbf{5.55}$$

This ratio indicates that, for every $1 of current liabilities, Higgins maintains approximately $5.55 of current assets. Higgins' ratio is higher than the industry average of 1.50, indicating that Higgins maintains a lower level of short-term debt compared to its current assets and has higher liquidity. However, maintaining such a high current ratio also suggests that the company may not be using its resources efficiently. Increasing short-term obligations would lower Higgins' current ratio, but this strategy alone would not help its efficiency. Higgins should consider investing more of its cash in order to generate future returns.

Financial Accounting 10th edition Libby Solutions Manual

E2–16. (continued)

Req. 3

Bailey Delivery Company, Inc.
Balance Sheet
At December 31, 2018

Assets		***Liabilities***	
Current Assets		*Current Liabilities*	
Cash	$35,000	Short-term notes payable	$16,000
Short-term notes receivable	4,000	*Total Current Liabilities*	16,000
Total Current Assets	39,000	Long-term notes payable	16,000
		Total Liabilities	32,000
Land	12,000		
Equipment	21,000	***Stockholders' Equity***	
		Common stock	10,000
		Additional paid-in capital	30,000
		Total Stockholders' Equity	40,000
		Total Liabilities &	
Total Assets	$72,000	***Stockholders' Equity***	$72,000

Req. 4

	Current Assets	÷	Current Liabilities	=	Current Ratio
2018	$39,000	÷	$16,000	=	2.44
2019	52,000	÷	23,000	=	2.26
2020	47,000	÷	40,000	=	1.18

The current ratio has decreased over the years, suggesting that the company's liquidity is decreasing. Although the company still maintains sufficient current assets to settle the short-term obligations, this steep decline in the ratio may be of concern – it may be indicative of more efficient use of resources or it may suggest the company is having cash flow problems.

Req. 5

The management of Bailey Delivery Company has already been financing the company's development through additional short-term debt, from $16,000 in 2018 to $40,000 in 2020. This suggests the company is taking on increasing risk. Additional lending to the company, particularly short-term, may be too much risk for the bank to absorb. Should the bank lend the $50,000, Bailey Delivery Company's current ratio would be 1.08 (97,000 ÷ 90,000) immediately after the financing. Based solely on the current ratio, the bank's vice president should consider not providing the loan to the company as it currently stands. Of course, additional analysis would provide better information for making a sound decision.

Financial Accounting 10th edition Libby Solutions Manual

P2–2.

Req. 1

East Hill Home Healthcare Services was organized as a corporation. Only a corporation issues shares of common stock to its owners in exchange for their investment, as in transaction (a).

Req. 2 (On next page)

Req. 3

The transaction between the two stockholders (Event *e*) was not included in the tabulation. Since the transaction in *(e)* occurs between the owners, there is no effect on the business due to the separate entity assumption.

Req. 4

(a) Total assets = $111,500 + $18,000 + $5,000 + $510,500 + $160,000 + $65,000
= $870,000

(b) Total liabilities = $100,000 + $180,000
= $280,000

(c) Total stockholders' equity = Total assets – Total liabilities
= $870,000 – $280,000 = $590,000

(d) Cash balance = $50,000 + $90,000 – $9,000 + $3,500 – $18,000 – $5,000
= $111,500

(e) Total current assets = Cash $111,500 + Short-Term Investments $18,000 + Notes Receivable $5,000 = $134,500

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$111,500+\$18,000+\$5,000}{\$100,000} = \frac{\$134,500}{100,000} = 1.35$$

This suggests that for every $1 in current liabilities, East Hill maintains approximately $1.35 in current assets. The ratio suggests that East Hill is likely maintaining adequate liquidity and using resources efficiently.

Req. 6

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$48{,}000}{\$48{,}000} = 1.00$$

This ratio indicates that Jaguar Plastics has relatively low liquidity; for every $1 of current liabilities, Jaguar Plastics maintains only $1 of current assets.

Financial Accounting 10th edition Libby Solutions Manual

P2–5. (continued)

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$134{,}609}{\$113{,}350} = 1.19$$

For every $1 of short-term liabilities, Apple Inc. has approximately $1.19 of current assets. This suggests that Apple has sufficient current resources to pay current liabilities. Apple has a very efficient cash management system and keeps its current resources at lower levels to maximize investment opportunities.

P2–6. (dollars in millions)

AP2–2.

Req. 1

Russeck Incorporated was organized as a corporation. Only a corporation issues shares of common stock to its owners in exchange for their investment, as Russeck did in transaction (c).

Req. 2 (On next page)

Req. 3

Since the transaction in *(i)* occurs between the owners and others outside the company, there is no effect on the business due to the separate entity assumption.

Req. 4

(a) Total assets = $35,000 + $2,000 + $85,000 + $107,000 + $510,000 = $739,000

(b) Total liabilities = $169,000 + $170,000 = $339,000

(c) Total stockholders' equity = Total assets – Total liabilities
= $739,000 – $339,000 = $400,000

(d) Cash balance = $120,000 + $110,000 – $3,000 + $100,000 – $5,000 – $2,000 – $200,000 – $85,000 = $35,000

(e) Total current assets = $35,000 + $2,000 = $37,000

Req. 5

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$35,000 + \$2,000}{\$169,000} = \frac{\$37,000}{\$169,000} = 0.219$$

This suggests that Russeck may not have sufficient liquidity to cover its current obligations. Russeck should consider increasing its current assets or seeking to convert some of its short-term debt to long-term debt.

Dividends payable	300
Current portion of long-term debt	2,731
Total current liabilities	126,745
Long-term debt	21,008
Other long-term liabilities	29,273
Total Liabilities	177,026
Stockholders' Equity	
Common stock ($0.01 par value)	506
Additional paid-in capital	378,744
Treasury stock	(635,179)
Retained earnings	657,545
Total Stockholders' Equity	401,616
Total Liabilities and Stockholders' Equity	$578,642

Req. 6

$$\text{Current Ratio} = \frac{\text{Total Current Assets}}{\text{Total Current Liabilities}} = \frac{\$240{,}238}{\$126{,}745} = 1.895$$

Ethan Allen maintains a relatively high current ratio, indicating that the company has almost $2 in current assets to pay each dollar of current obligations.

CON2–1. (continued)

Req. 6

	Current Assets	÷	Current Liabilities	=	Current Ratio
On March 31	$11,500	÷	$4,000	=	2.875

With a current ratio of 2.875, PPSS has liquidity with sufficient current assets to settle short-term obligations. However, this may change as the inventory is received in April and operations begin requiring paying cash for inventory purchases from suppliers, advertising, utilities, employee salary, and other operating needs, and paying notes payable when due. One of the most significant problems for new small businesses is generating sufficient cash from operations to pay obligations and maintain liquidity.

Financial Accounting 10th edition Libby Solutions Manual

CASES AND PROJECTS

ANNUAL REPORT CASES

CP2–1. (dollars in thousands)

1. The company is a corporation since it maintains common stock and contributed capital and its owners are referred to as "stockholders." (Refer to the stockholders' equity section of the balance sheet).

2. The amount listed on the balance sheet for inventories does not represent the expected selling price. It represents the historical cost of acquiring the inventory, as required by the cost principle.

3. The company's current obligations include: Accounts payable, Accrued compensation and payroll taxes, Accrued rent, Accrued income and other taxes, Unredeemed gift cards and gift certificates, Current portion of deferred lease credits, and Other liabilities and accrued expenses.

4. $$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$968{,}530}{\$485{,}221} = 2.00$$

   The current ratio measures the ability of the company to settle short-term obligations with current assets. American Eagle Outfitters' current ratio of 2.00 suggests strong liquidity with $2.00 in current assets for every $1.00 in current liabilities.

5. The company spent $169,469 to purchase property and equipment in the fiscal year ended 2/3/2018; $161,494 in the fiscal year ended 1/28/2017; and $153,256 in the fiscal year ended 1/30/2016. This information is listed as *Capital expenditures for property and equipment* in the investing activities section of the Consolidated Statement of Cash Flows.

© 2017 by McGraw-Hill Education. All rights reserved. No reproduction or distribution without the prior written consent of McGraw-Hill Education.

Financial Accounting 10th edition Libby Solutions Manual

CP2–2. (in thousands)

1.

Assets	=	Liabilities	+	Shareholders' Equity
$1,187,607	=	$533,607	+	$ 654,000

2. No – shareholders' equity is a residual balance, which means the shareholders will receive what remains in cash and assets after the creditors have been satisfied. It is unlikely that shareholders would receive the retained earnings of $710,081 or total stockholders' equity of $654,000. In addition, nearly all assets on the balance sheet are stated at historical cost, not at market value (the amount that could be received if the assets are sold at the end of the year).

3. The company's noncurrent liabilities are Deferred lease credits of $137,618 and Other long-term liabilities of $105,125.

4. $$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$565,136}{\$290,864} = 1.94$$

5. The company had a net cash outflow from investing activities of $66,667, primarily because the company acquired additional property, plant, and equipment (capital expenditures) for $57,435. It did not have any sales of assets during the year.

© 2020 by McGraw-Hill Education. All rights reserved. No reproduction or distribution without the prior written consent of McGraw-Hill Education.

Financial Accounting 10th edition Libby Solutions Manual

CP2–3. (dollars in thousands)

1.

	Industry Average	American Eagle Outfitters	Express, Inc.
Current Ratio =	2.43	2.00	1.94

Both the American Eagle Outfitters' and Express, Inc.'s current ratios are lower than the industry average of 2.43. However, because both have a current ratio near or at 2.00, both companies are able to satisfy their current obligations with current assets.

Many retailers, such as American Eagle Outfitters, choose to rent space rather than purchase buildings for stores. Acquiring buildings often requires borrowing long-term (mortgages). Thus, the choice of renting or purchasing buildings does not have an effect on the numerator or denominator of the current ratio.

Note: The retail industry has been struggling for some time and is quite susceptible to volatile changes in the economy. When the economy is weak, these companies need a cushion of current assets to be able to continue to pay employees and suppliers when sales and cash flows are lower. Both American Eagle Outfitters and Express, Inc., appear to follow this pattern with a higher current ratio than other industries such as restaurants.

2. As indicated in the financing activities section of each company's statement of cash flows, during the most recent year, American Eagle Outfitters spent $87,682 repurchasing common stock from publicly announced repurchase programs, and spent $12,513 repurchasing stock from employees. Express, Inc., spent $17,264 repurchasing shares as part of its repurchase program and $1,599 for tax withholding obligations.

3. As indicated in the statement of cash flows in the financing activities section, American Eagle Outfitters paid $88,548 in dividends. Express, Inc., did not pay any dividends during the year.

4. On the balance sheet:

American Eagle reports → Property and equipment, at cost, net of accumulated depreciation (all on one line).
Express, Inc., reports → Property and equipment on one line at cost, Accumulated depreciation on the next line, and Property and equipment, net below that.

Details of the amount of land, building, and equipment are reported by each in the notes to the financial statements. Other companies sometimes choose to report these assets separately on the balance sheet, using captions such as: Land; Buildings and building improvements; Furniture, fixtures and equipment; and Leased property and equipment.

Financial Accounting 10th edition Libby Solutions Manual

FINANCIAL REPORTING AND ANALYSIS CASES

CP2–4.

Dollars are in thousands:

1. (a) Chipotle's total assets for the quarter ended September 30, 2017 are $2,064,377 in thousands of dollars.

   (b) Current liabilities increased over nine months from $281,793 thousand at December 31, 2016, to $323,402 thousand on September 30, 2017.

   (c) Current Ratio at 9/30/17 $= \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{\$655{,}936}{\$323{,}402} = 2.028$

   Chipotle's current ratio decreased from the level of 2.028 on September 30, 2017 to 1.944 on December 31, 2017 (as discussed in the chapter). This indicates that, between September 30, 2017, and December 31, 2017, Chipotle decreased its liquidity slightly. Current assets decreased by approximately $26 million while current liabilities increased by about $1 million.

2. (a) For the nine months ended September 30, 2017, Chipotle spent $165,506 on the purchase of leasehold improvements, property, and equipment.

   (b) The total cash flows used in financing activities was a cash outflow of $209,575, mostly from the $209,585 repurchase of Chipotle's stock from investors (called "treasury stock").

CP2–5.

The major deficiency in this balance sheet is the inclusion of the owner's personal residence as a business asset. Under the separate entity assumption, each business must be accounted for as an individual organization, separate and apart from its owners. The improper inclusion of this asset as part of Frances Sabatier's business:

- Overstates total assets by $300,000; total assets should be $105,000 rather than $405,000, and
- Overstates stockholders' equity that should be only $5,000, rather than $305,000.

Since current assets and current liabilities were not affected, the current ratio remains the same. However, other ratios involving long-term assets and/or stockholders' equity will be affected.

CP2–6.

Dollars are in thousands:

1. The company is a corporation because its owners are referred to as "stockholders."

2.

Assets	=	Liabilities	+	Stockholders' Equity
$7,412,477	=	$2,365,259	+	$5,047,218

3.

	Current Assets	÷	Current Liabilities	=	Current Ratio
2017	$5,321,884		$583,278		9.124
2016	4,652,196		584,021		7.966

In 2017, for every $1 of current liabilities, Twitter maintained approximately $9.12 of current assets, suggesting that Twitter is highly liquid and has the ability to pay its short-term obligations with current assets in the upcoming year. Since 2016, the current ratio has increased from 7.966 The interpretation of this ratio would be more useful given information on the company's current ratio compared to the current ratio for the industry and/or competitors and additional years of data to observe trends.

4.

Accounts payable (–L)	170,969	
Cash (–A)		170,969

5. Over its years in business, it appears that Twitter has been unprofitable, based on a negative amount in Accumulated Deficit of $2,703,308. The Accumulated Deficit account represents the cumulative losses of the firm since the business began, assuming no dividends were declared (unlikely given its deficit position).

   In addition, Twitter appears unprofitable in the most recent year because Accumulated Deficit increased (due to further losses). It is possible to determine the amount of net loss by using the following equation, assuming no dividends were declared:

   (in thousands)

Beginning		For the Year				Ending
Accum. Deficit	+	Net Income(Loss)	–	Dividends declared	=	Accum. Deficit
$(2,619,063)	+	?	–	$ 0	=	$(2,703,308)

   Thus, net loss for the most recent year was $(83,705).

CP2–7. (continued)

Req. 2

Dear _____,

I corrected the balance sheet for LettuceDoThis.Com, Inc. Primarily, I reduced the amount reported for buildings to $60,000, which is the historical cost less any depreciation. Estimated market value is not a generally accepted accounting principle for recording property, plant, and equipment. The $38,000 difference ($98,000 – $60,000) reduces total assets and reduces retained earnings. In fact, retained earnings becomes negative suggesting that there may have been several years of operating losses.

Before making a final decision on investing in this company, you should examine the past three years of *audited* income statements and the past two years of *audited* balance sheets to identify positive and negative trends for this company. You can also compare this company's current ratio to that of the industry to assess trends in liquidity, and compare how this company's long-term debt as a proportion of stockholders' equity has changed over time. You should also learn as much about the industry as you can by reviewing recent articles on economic and technological trends that may have an impact on this company.

Financial Accounting 10th edition Libby Solutions Manual

CP2–8.

1. The most obvious parties harmed by the fraud at Biovail Corporation were the stockholders and creditors. Stockholders were purchasing shares of stock that were inflated due to the fraud. Creditors were lending funds to the company based on inflated income statement and balance sheet information. When the fraud was discovered, the stock price dropped causing the stockholders to lose money on their investments. In addition, the creditors have a lower probability of receiving full payment on their loans. The vendors who assisted in verifying false promotional allowances were also investigated.

   Those who were helped by the fraud included the former executives who were able to receive substantial bonuses based on the inflated results of operations.

2. Biovail set certain financial goals and tied the former executives' bonuses to meeting the goals. Adopting targets is a good tool for monitoring progress toward goals and identifying problem areas, such as rising costs or sagging sales. Better decision making can result by heading off potential problems before they grow too large. However, setting unrealistic financial targets, especially in poor economic times, can result in those responsible for meeting the targets circumventing appropriate procedures and policies for their own benefit.

FINANCIAL REPORTING AND ANALYSIS TEAM PROJECT

CP2–9.

The solution to this team project will depend on the companies and/or accounting period selected for analysis.
