CHAPTER ONE

Answers to *Test Your Understanding* Questions

1. a) P b) N c) N d) P

2. a) Mi b) Ma c) Mi d) Ma

3 a) K b) C c) K d) C
e) B f) K

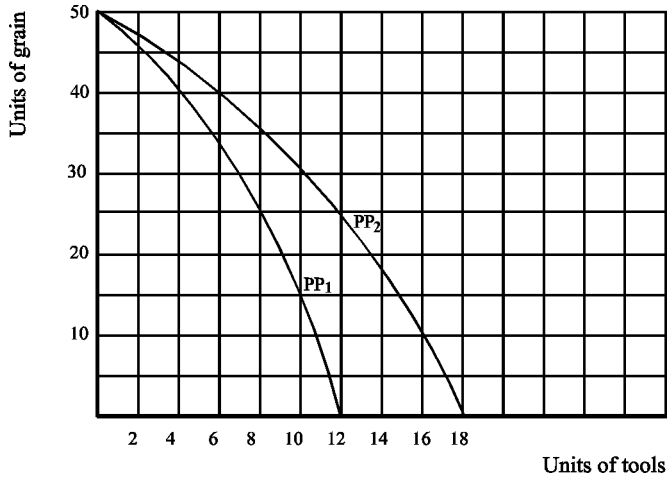

4. a) K b) N c) N
d) L e) E f) K

It's News to Me

I. d) No, if it involves the use of resources which have alternative uses.
II. c) It does not lead to the reduction of depletable resources.
III. b) The value of other activities that the funds could have been spent on.

5. a) **400 guns**
b) **100 guns.** (This means going from combination *b* to combination *c*. As a result, the number of guns would drop from 400 to 300.)
c) **greater** (since it costs 150 guns going from c to d compared to only 100 guns from *b* to *c*)

6. a) and b) See the following figure:

c) **25 units of grain** (old combination C would now be 25 grain and 12 tools.)

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

Answers to *Connect Study Problems*

1. a) **20** tea is gained at a cost of **10** coffee. (Point u means 0 tea and 120 coffee; point v is 20 tea and 110 coffee.)
b) **20** tea is gained at a cost of **30** coffee (Point w means 35 tea and 100 coffee; point x is 55 tea and 70 coffee.)
c) **5** tea is gained at a cost of **30** coffee (Point y means 65 tea and 30 coffee; point z is7 0 tea and 0 coffee.)

2. a) 10 **beef** (half-way between **D** and **E**);
b) **70 rice** (half- way between **B** and **C**);
c) **no** (100 rice is between **C** and **D** but that means production of beef is between 20 and 35)
d) **yes** (combination **C** is 90 rice and 35 beef so it can certainly produce less than this.)

3. a) **15 units of beef** (This means going from combination A to combination C, where beef drops from 50 to 35).
b) **15 units of beef.** (The increase in rice from 90 to 120 causes beef to drop from 35 to 20).
c) **½ unit of beef.** (30 more rice costs 15 beef; therefore 1 more rice costs 15/30 beef.)
d) **30 units of rice** (The increase in beef from 20 to 35 causes rice to drop from 120 to 90).

4. a) See the following table:

Table 1.9 (Completed)

Possibility	**A**	**B**	**C**	**D**	**E**	**F**
Cheese	0	30	50	65	75	80
Wine	110	105	95	70	40	0

b) **No**. If it produced 65 cheese – combination D – the maximum wine would be 70.

c) **30 wine.** This would mean going from combination D to E. Production of wine would drop from 70 to 40, a difference of 30.

d) **15 cheese.** This would mean going from combination D to C. Production of cheese would drop from 65 to 50, a difference of 15.

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

5. a) **40 wheat.** This is half-way between combinations C and D. Half-way between 35 and 45 wheat is 40 wheat.

b) **4 cars.** This means going from combination C to D. Car production would drop from 18 to 14, a difference of 4.

c) **2 ½ wheat.** This means going from combination D to C. 4 more cars would cost 10 wheat; so 1 car would cost 10/4 or 2 ½ wheat.

6. a) See the following table:

Table 1.12 (Completed):

	A	B	C	D	E	F
Balls	0	150	250	325	375	400
Bats	55	52	46	36	20	0

b) **100 balls** (Going from combination C to combination B, ball production drops from 250 to 150.)
c) **No.** (The closest is combination C at 250 balls and 46 bats.)
d) See the following table:

Table 1.12 (Completed):

	A	B	C	D	E	F
Balls	0	150	250	325	375	400
Bats	55	52	46	36	20	0
Bats 2	80	72	61	46	25	0

(Bat production increases by ½ unit ***per worker*** – this is not a 50% increase in production!)
e) **Yes**. This is shown in the revised production possibilities table:
New combination C gives exactly 250 balls and 61 bats.

7. a) 0.75 trucks (12/16)
b) 1.75 trucks (14/8)
c) 1.33 kiwis (16/12)
d) 0.57 kiwis (8/14)
e) 12 kiwis and 13 trucks (8 kiwis and 6 trucks in Kitchener and 4 kiwis and 7 trucks in Waterloo.)
f) 16 kiwis and 14 trucks (Kitchener produces only kiwis and Waterloo only trucks.)
g) 4 kiwis and 1 truck (The difference between answers e) and f)).

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

8. a) See the following table:

Table 1.13 (Completed)

	A	B	C	D	E	F
Capital goods	0	25	40	50	55	58
Capital goods 2	0	40	64	80	88	92.8
Consumer goods	50	40	30	20	10	0

b) **24** more capital goods. (If it still wants 30 consumer goods, it could now have 64 capital goods – 24 more than previously.)

c) **10** more consumer goods. (If it still wants 40 capital goods, it can get them at the new combination B, which will also give 40 consumer goods – 10 more than previously.)

d) **33** capital goods. (This is a movement from combination F to combination B, which would result in capital goods falling from 58 to 25.)

e) **52.8** capital goods. (This is a movement from combination F to combination B in the table above which would result in capital goods in the capital 2 row falling from 92.8 to 40.)

9. a) See the following table:

Table 1.15 (Completed)

	A	B	C	D	E	F
Movies watched	0	1	2	3	4	5
Pages studied	180	175	160	130	80	0

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

b) See the following figure:

Figure 1.10 (completed)

c) **20 pages** of reading. It might be helpful to produce a production possibilities table as follows:

From combination F to D gives 2 movies watched, pages studies drops from 180 to 160.

d) **No.** Combination C shows the best she can do is 3 movies and 130 pages studied.

e) **80 pages** of reading. Going from combination B to combination A, pages studied drops from 80 to 0.

10. a) Oz: **20** food units and **10** equipment units
Zas **10** food units and **15** equipment units

(This represent one-half of the quantities for each country shown in the question).

b) **30** food units and **25** equipment units

(Found by adding together the totals for each country shown in answer a))

c) Oz: **40** food units and **0** equipment units
Zas **0 food** units and 30 equipment units

(Since Oz is more productive in food than is Zas, it would produce the amount of food as shown in the question and zero equipment. Since Zas is more productive in equipment than is Oz, it would produce the amount of equipment as shown in the question and zero food.)

d) **40** food units and **30** equipment units. (Found by adding the quantities in answer c))

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

e) **10** food units and **5** equipment units. (The difference between the quantities in answer d) and answer b).)

The Impossible Answer

1.	a)	incorrect	b)	impossible	c)	correct
2.	a)	impossible	b)	incorrect	c)	correct
3.	a)	incorrect	b)	correct	c)	impossible

CHAPTER ONE
The Economic Problem

Overview Comments

In Chapter One, we decided to begin by giving students an idea of how diverse and how engaged our discipline is by looking at a number of current controversies. This, we hope helps to correct the perception that many students have of economics as being a dry and theoretical subject with little relevance to the real world. We then focus on what is, arguably, the most important idea in economics: that scarcity forces choice and choice involves the concept of opportunity cost. We look at the three fundamental questions in economics and four methods of co-ordinating an economy and we have found that students react well to a discussion of both of these topics. Perhaps we should remind ourselves that introductory chapters are probably the only opportunity for us to encourage students to look beyond the market structure and realize that it is only one of various possible ways for society to organize its economic affairs.

We discuss the fact that the discipline's methodology is, by necessity, abstract, since this is the only way one can deal with such a broad range of topics. The discussion of the use of abstract methodology leads naturally into a discussion of the role of models in economics.

We then look at our first model in economics, production possibilities, and show how illuminating this idea can be since it allows us to illustrate some of the basic, but vital topics in economics: choice, cost, economic growth, technological improvement and the immense importance of investment.

Suggested Approaches and Helpful Hints

As a starting point in a new course, it may be useful for you to walk students through the *Study Guide* (as well as the *Test your Understanding* questions in the body of each chapter) and explain that answers can be found in the Connect Answer Key. Answers to the *Problems for Further Study* are found below.

Many years of teaching the Principles has convinced both of your authors than the vast majority of students can get a good grade in this supposedly tough course if they do **all** of the questions in the *Study Guide*. For some, this will, at first, take a lot of time but inevitably they will get faster and faster at answering questions as the term progresses and this will do wonders for their self-confidence.

It is our experience that if we spend enough time on production possibilities, we can illustrate six distinct aspects of economics: the necessity of choice, economic growth,

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

unemployment, efficiency, technological change and opportunity cost. This makes production possibilities a powerful model and, more importantly, demonstrates what we mean by the word model. Given the huge role that models play in economic theory, understanding exactly what a model is can be an important step for any student.

Answers to *Problems for Further Study*

1. a) normative; b) positive; c) positive; d) normative.

2. a) K b) L c) N d) N e) E

3. a) C b) K c) C d) B

4. Economics is interested in how society makes choices about the production and allocation of resources and products. All societies must make choices since they will never be able to produce everything that people want. The reason for this is that resources are scarce in relation to unlimited human wants.

5.

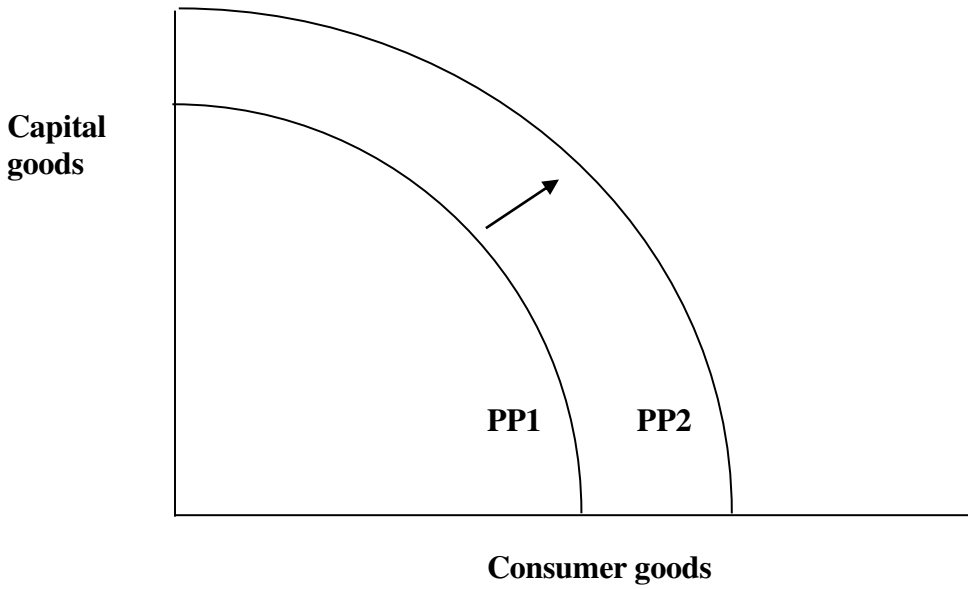

Factors of Production	**Factor explained**	**Factor Payments**
Labour	human physical and mental effort	wages
Capital	human made resources	interest
Land	natural resources	rent
Enterprise	the innovator and risk-taker	profit

6. Normative statement: Too many people lost their jobs in Canada due to COVID-19.
Positive statement: In April 2020, the unemployment rate rose to 13% which is the highest since 1982.

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

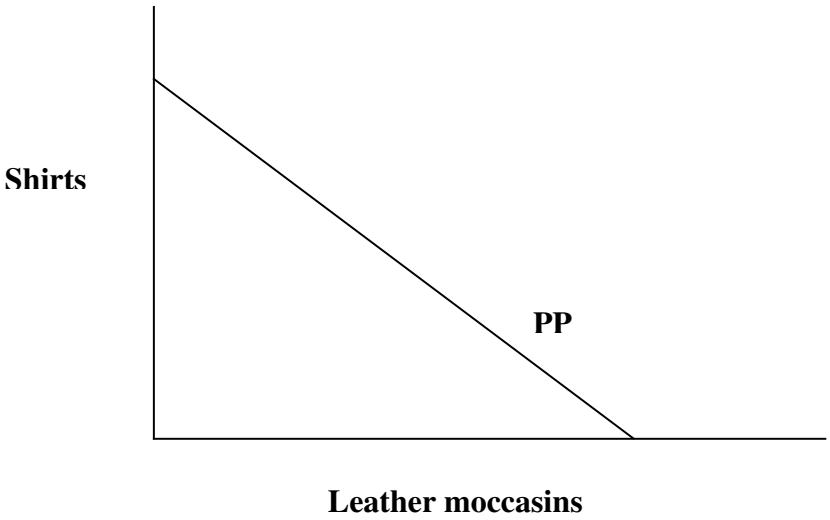

7.

There are two major causes of economic growth:

- an increase in the quantity or quality of productive resources
- an improvement in technology

8. The production possibility curve would look as follows:

© McGraw Hill 2021

Principles Of Microeconomics (Canadian) 10th edition Sayre Solutions Manual

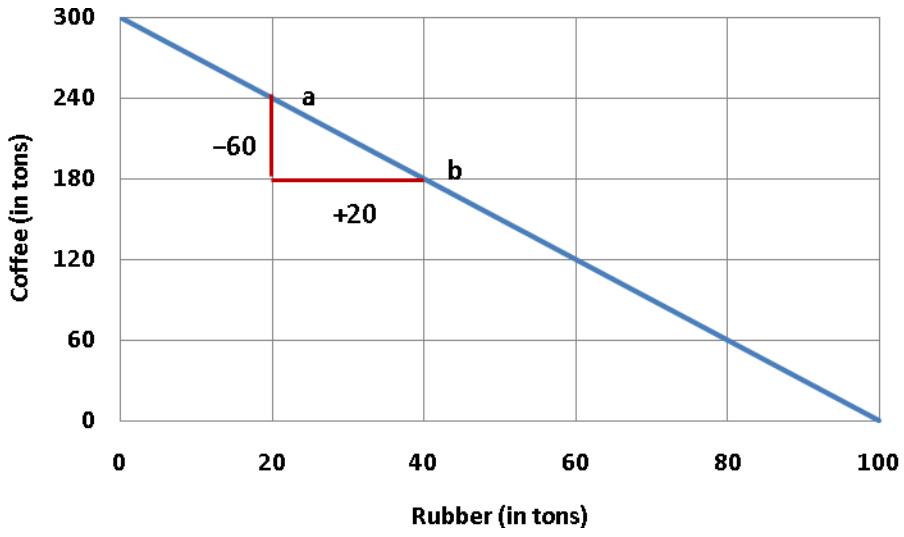

The production possibilities curve would plot as a straight line because the per unit cost of production would remain constant. In other words, it would always cost the same number of moccasins to produce additional shirts, and vice versa.

9. Both a map and a theory abstract from reality and highlight only the most important relationships.

10. Command comes in the form of parents insisting that children do certain things such as cleaning their room. Most "big" decisions like where to take a holiday are often made co-operatively. Custom comes in the form of parents using the same values to raise their children as was used by their own parents. Competition might be used, for example where siblings compete with each other to earn increments of allowance. The second half of the question is asked only to stimulate thought on the effectiveness of incentives (rewards) and dis-incentives (penalties) within the family structure.

11. Since Kant is a high school dropout with no work experience, we would have to recognize that his next best alternative is probably a minimum wage job. (On the other hand, if some employer consider Kant enough of celebrity to hire him for a public image job, then Kant might do better.) Assuming a minimum wage job, his opportunity cost of continuing to play hockey would the minimum wage rate (say $10 and hour) times 40 (hours per week) times 52 (weeks per year) which equals $20.800 per year.

12. See the following figure:
