Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

SKU: 9781260326475-TEST-BANK

Principles Of Microeconomics 10ce Edition by Sayre Ch01

1) The three fundamental questions in economics are what, how, and how many.

- ◎ true
- ◎ false

Question Details
Accessibility : Keyboard Navigation
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Learning Objective : 01-05 Explain the three fundamental questions that all societies must address.
Topic : 01-11 The Three Fundamental Questions

2) Opportunity cost is the value of the next-best alternative that is given up as a result of making a particular choice.

- ◎ true
- ◎ false

Question Details
Accessibility : Keyboard Navigation
Learning Objective : 01-03 Demonstrate that scarcity, choice, and opportunity cost are at the heart o
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Topic : 01-08 Efficiency and Allocation

3) There are only three Cs that humankind has used to coordinate its economies: cooperation, custom, and competition.

- ◎ true
- ◎ false

Question Details
Accessibility : Keyboard Navigation
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Learning Objective : 01-06 Explain the four different ways that economic societies can be organized.
Topic : 01-15 Four Types of Economies: The Four Cs

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

4) Wages, interest, rent, and profits are the four factors of production.

- ◎ true
- ◎ false

Question Details

Learning Objective : 01-03 Demonstrate that scarcity, choice, and opportunity cost are at the heart o
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Topic : 01-08 Efficiency and Allocation

5) A production possibility curve is a graphical representation of the various combinations of output that are wanted.

- ◎ true
- ◎ false

Question Details
Accessibility : Keyboard Navigation
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Learning Objective : 01-07 Use the production possibilities model to illustrate choice and opportunit
Topic : 01-21 Production Possibilities

6) Macroeconomics focuses on the outcomes of decisions by people and firms, whereas microeconomics is a study of how the major components of an economy interact.

- ◎ true
- ◎ false

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

Question Details
Accessibility : Keyboard Navigation
Topic : 01-07 What Is Economics?
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Learning Objective : 01-02 Define economics and then make a distinction between microeconomics and ma

7) Technological improvement can be illustrated graphically by a rightward shift in the production possibilities curve.

- ◎ true
- ◎ false

Question Details
Accessibility : Keyboard Navigation
Bloom's : Remember
Bloom's : Understand
Difficulty : Easy
Learning Objective : 01-07 Use the production possibilities model to illustrate choice and opportunit
Topic : 01-23 Shifts in the Production Possibilities Curve: The Causes of Economic Growth

8) Allocative efficiency is also referred to as productivity.

- ◎ true
- ◎ false

Question Details

97) Tigris produces only two products: tennis balls and tennis racquets. Each worker comes with a fixed quantity of materials and capital, and the economy's labour force is fixed at 100 workers. The following table indicates the amounts of balls and racquets that can be produced daily with various quantities of labour:

Number of Workers	Daily production of Tennis Balls	Number of Workers	Daily Production of Racquets
0	0	0	0
20	80	20	30
40	150	40	50
60	200	60	65
80	230	80	75
100	250	100	80

a) Can Tigris produce 200 balls and 60 racquets?
b) What is the total cost of producing 150 balls?
c) What is the total cost of producing 75 racquets?
d) If Tigris is currently producing 230 balls, what is the cost of an additional 20 balls?
e) If Tigris is currently producing 30 racquets, what is the cost of an additional 20 racquets?

Learning Objective : 01-07 Use the production possibilities model to illustrate choice and opportunit
Topic : 01-21 Production Possibilities

129.5) Refer to the table above to answer this question. If Erewhon is producing combination D, what is the cost of producing 4 more units of wine?

A) 2/3 of a unit of cheese
B) 1 ½ units of cheese
C) 6 units of cheese
D) 8 units of cheese

130) The following table shows the production possibilities for producing rice and beans in the country of Aipotu:

% Inputs	Output of rice	% Inputs	Output of beans
0	0	0	0
20	100	20	60
40	180	40	100
60	240	60	130
80	280	80	150
100	300	100	160

Question Details

130.1) Refer to the table above to answer this question. If Aipotu produces 240 rice, how many beans can it produce?

A) 30 beans
B) 60 beans
C) 100 beans
D) 130 beans

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

87) The first fundamental question asks: What is to be produced? What this means is that all societies must decide what types of products and what quantities of each it should produce every year. Should it put the emphasis on capital goods or consumer goods, on residential or non-residential goods, on electronic products or food stuffs and so on.
The second question is: How are these products going to be produced, i.e. what technology should we employ? Should we employ a simple but labour-intensive technology, for instance, or alternatively make use of sophisticated but expensive machinery? Should we manufacture things in giant assembly-line plants or in small workshops etc.?
The final question is: For whom are these products produced? How do we allocate the products and the resulting income between people? How are we to decide what share of the economic pie each person should receive?

88)

Factors of Production	Factor explained	Factor Payments
Labour	Human physical and mental effort	Wages
Capital	Human made resources	Interest
Land	Natural resources	Rent
Enterprise	The innovator and risk-tanker	profit

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

89) The law of increasing costs states that as an economy's production level of any particular item increases, its per unit cost of production rises. Perhaps one of the best examples of this law in operation is in the area of pollution. Using hypothetical figures to illustrate: 40 years ago, the cost to reduce harmful automobile emissions by 30% was say $5 a car (filtering devices etc); to reduce those emissions by a further 30% would have cost an additional $20 a car (enforced use of unleaded gases etc); a further 30% reduction would cost an additional $100 a car. To reduce the emissions to zero would likely cost $2,000 a car. What this means is that the provision of cleaner and cleaner air gets increasingly expensive.

90)**Co-operation** means that decisions in society are made by people discussing things together in order to achieve a consensus, as in a commune for instance.**Command** implies a leader or group of leaders who have the authority to determine what happens without consultation with the people as happened in ancient slave societies and in modern totalitarian states like Nazi Germany or the Soviet Union.**Custom** is a feature of traditional societies like Feudal Europe, China and Japan where the fundamental questions were determined by past practice; what was good for our ancestors is good enough for us.**Competition** is the most recent of the four Cs and emerged out of the Industrial Revolution 250 years ago. It places emphasis on individuals acting separately and for their own good in producing and consuming. Here, it is the market that determines how the three fundamental questions are answered.

91) The $20,000 is the**directcost** of attending college. The statement failed to incorporate the**opportunitycost** of attending college, which includes the salary a student could have earned during a year, and also the interest rate that could have been earned, had the student deposited the money in the bank.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

92) Microeconomics involves an analysis of individual parts of an economy whereas macroeconomic analysis looks at the big picture, the economy as a whole. Microeconomics is the study of individual choice, and how choice is influenced by economic forces. Macroeconomics is the study of the economy as a whole, which includes inflation, unemployment, business cycles and growth.

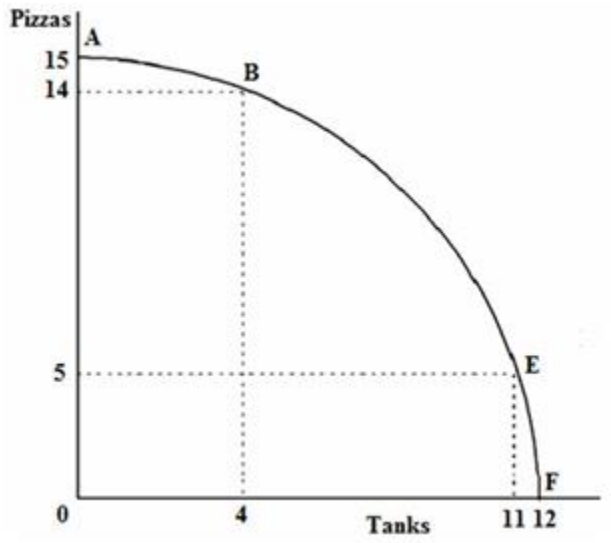

93) Microeconomics is the study of individual choice and how that choice is influenced by economic forces, while macroeconomics is the study of inflation, unemployment, business cycles, and growth primarily from the whole to the parts. Micro focuses on individual choices while macro focuses on aggregate relationships.

(a) macroeconomics
(b) microeconomics
(c) microeconomics
(d) microeconomics
(e) macroeconomics

94) (a) The entire curve should shift out, since more land could presumably be used to grow either crop.
(b) The vertical intercept will shift up, as greater amounts of corn can now be grown, but the amount of potential soybean crop remains unchanged.
(c) The entire curve will shift out from the origin, though not necessarily by 50 percent since we do not know the productivity of the workers.
(d) No effect, since it has changed neither the amount of inputs available nor the technology.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

95) (a) The diagram should look like this:

(b) The opportunity cost of moving from point A to point B is 1 pizza.
(c) The cost of moving from point E to point F is 5 pizzas.
(d) In moving from A to B, Lavaland gained 4 tanks. In moving from E to F, Lavaland gained 1 tank. But the cost of attaining one tank was much more with the move from E to F than it was when the movement was from A to B. In moving from A to B each tank required the giving up of an average of 1/4 of a pizza, whereas moving from E to F one tank required giving up 5 pizzas. The increasing cost of another tank (in terms of pizzas foregone) as Lavaland moved from A to F illustrates the principle of increasing marginal opportunity cost.

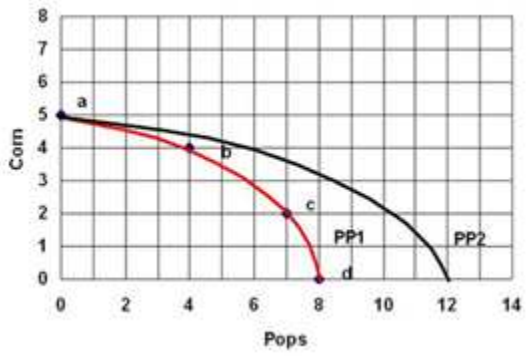

96) a) K
b) N
c) K
d) L
e) L

97) a) No.
b) 15 racquets.
c) 170 balls.
d) 30 racquets.
e) 30 balls.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

98) a) 1 1/2 cameras.
b) 1 1/3 binoculars.
c) 11 binoculars and 12 cameras.
d) 12 binoculars and 15 cameras.
e) 1 binocular and 3 cameras.

99) a) 3 corn
b) 4 pops
c) 2 corn
d) See the following graph:

e) 4 corn.

100) a) N MI
b) P MI
c) N MA
d) P MA
e) N MA

101) The study of economics helps us to understand better how the world functions. Analyzing issues from an economic dimension gives you the insight to the different arguments of many controversies in our society.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

102)**Pros**

· Greater income which allowing consumers to purchase more and bigger goods.
· Higher standard of living enabling people to enjoy more leisure time.
· Increase social and political stability because dividing a growing pie is easier than dividing a shrinking pie.
· Decrease in birth rate reduces the strain on the environment.

Cons

· Leads to greater environmental damage, increase stress and traffic congestion in people's daily life.
· Too much emphasis on material things at the expense of things that are more important for personal well-being (for example, job satisfaction).

103)**Pros**

· Government might be able to lower social unrest and disharmony by reducing the income gap between the rich and poor.

Cons

· Higher taxes distort markets.
· Disincentive to work hard and to take on risks.

104) Economics is a social science that studies the ways humans and societies organize themselves to make choices about the use of scarce resources, which are used to produce the goods and services necessary to satisfy human wants and needs.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

105) Positive statements are assertions about the world that can be verified by using empirical data. Normative statements are based on personal value systems and cannot be verified by appealing to facts. Economic theory attempts to relate to positive statements and not normative statements.

106) Normative statements are based on personal value systems and cannot be verified by appealing to facts. Example, the unemployment rate should be 5% or the unemployment rate ought to be 5%.

107) Factor of production is a productive resource. Factor price is what is paid for the productive resource.
Factors of production: land, labour, capital, enterprise.
Factor price: rent for land, wage for labour, interest for capital, and profit for enterprise.

108) Voluntary trade always benefits both parties because if one party does not benefit, that party will not trade.

109) Society cannot produce all the goods and service everybody wants because resources are scarce. The basic problem to an economy is unlimited needs and wants and limited resources. To best solve this problem, the economy has to decide what goods and service to produce to best satisfy human needs and wants. Thus, scarcity implies choice.

110) Since the economy cannot produce all the goods and service everybody wants, the economy has to decide what goods and services to produce. By deciding to produce one good, the economy is giving up the opportunity to produce something else. This is opportunity cost.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

111) Consumer goods are products used by consumers to satisfy their wants and needs, for example bread and beer. Capital goods are goods used to produce consumer goods and they do not directly satisfy consumer wants and needs.

112) Country A will have higher economic growth. By producing more capital goods in the current period, country A will be able to produce more capital and consumer goods in the future.

113) a) The per unit opportunity cost from point A to point B is 0.40 units of Good X.
b) The per unit opportunity cost from point B to point C is 1 units of Good X.
c) The per unit opportunity cost from point B to point C is 1.33 units of Good X.
d) The per unit opportunity cost from point B to point C is 9 units of Good X.

114) It depends on the opportunity cost, if the city's opportunity cost for labour is lower than the city will use labour to remove snow from city highways.

115) a) 7 units of jelly
b) 3 units of peanut butter
c) 12 units of peanut butter
d) 8/3 units of jelly

116) a) Method A is more efficient. Method A requires one less unit of labour the produce the same amount of output as Method B. Efficiency means getting the most for the least.
b) Indeterminate, Method A requires one less unit of capital but one more unit of labour to produce the same amount of Method C's output. Method A and Method C uses different technology.

Principles Of Microeconomics (Canadian) 10th edition Sayre Test Bank

117) a) The opportunity cost of 1 cup in Alpha is 1/3 saucer.
b) The opportunity cost of 1 saucer in Beta is 1/2 cup.
c) Alpha would specialize in the production of cups because it has a lower opportunity cost in cup production. The opportunity cost of 1 cup for Alpha is 1/3 saucer and 2 cups for Beta.

118) *Productive efficiency* refers to 'the production of an output at the lowest average cost.'
Allocative efficiency refers to 'the production of the combination of products that best satisfies consumer's demand'.

119) Productive efficiency.

120) Allocative efficiency.
