14. a. The 2^k rule would suggest 6 classes as $2^5 = 32 < 40 < 64 = 2^7$. With seven classes the interval would be larger than (84 – 18) / 6 = 11, but as we are summarizing money observations a class interval of 10 is more convenient to work with.
The frequency distribution using 10 is:

d. Based on total sales, the pizza market is dominated by Pizza Hut and Dominoes. Both companies exceed $12 billion in sales. They also have the most units, i.e. number of stores. So, another way to look at sales is by average sales per store or unit. Note that this distribution is quite different. Most stores (86) of the companies sell between

Based on the cumulative frequency distribution, we can estimate that 40% of the teams have a salary of about $90 million or less. Using the table and the distribution, about 6.67% of the 30 teams have a salary of $165 million or more. 6.67% of 30 teams rounds to 2 teams. **(LO2-3)**

53. Since $2^6 = 64 < 80 < 128 = 2^7$, use 7 classes. The interval should be at least (11973 – 10000)/7 = 281 miles. Use 300. The resulting frequency distribution is:

Class	*f*
9900 up to 10200	8
10200 up to 10500	8
10500 up to 10800	11
10800 up to 11100	8
11110 up to 11400	13
11400 up to 11700	12
11700 up to 12000	20

a. The typical amount driven, or the middle of the distribution is about 11100 miles. Based on the frequency distribution, the range is from 9900 up to 12000 miles. **(LO2-3)**

b. The distribution is somewhat "skewed" with a longer "tail" to the left and no outliers. **(LO2-3)**
