CHAPTER 2

UNDERSTANDING THE ISSUES

1. (a) Jacobson has a passive level of ownership and in future periods will record dividend income of only 15% of Biltrite's declared dividends. Jacobson will also have to adjust the investment to market value at the end of each period.

(b) Jacobson has an influential level of ownership and in future periods will record investment income of 40% of Biltrite's net income. Any dividends declared by Biltrite will reduce the investment account but will not affect the investment income amount.

(c) Jacobson has a controlling level of ownership and in future periods will add 100% of Biltrite's net income to its own net income. Biltrite's nominal account balances will be added to Jacobson's nominal accounts. Any dividends declared by Biltrite will not affect Jacobson's income.

(d) Jacobson has a controlling level of ownership and in future periods will add 100% of Biltrite's net income to its own net income. All (100%) of Biltrite's nominal account balances will be added to Jacobson's nominal account balances. This will result in consolidated net income, followed by a distribution to the non-controlling interest equal to 20% of Biltrite's income. Any dividends declared by Biltrite will not affect Jacobson's income.

2. The elimination process serves to make the consolidated financial statements appear as though the parent had purchased the net assets of the subsidiary. The investment account and the subsidiary equity accounts are eliminated and replaced by the subsidiary's net assets.

3. (a)

Value Analysis Schedule	Company Implied Fair Value	Parent Price (100%)	NCI Value (0%)
Company fair value	$1,200,000	$1,200,000	N/A
Fair value of net assets excluding goodwill	800,000	800,000	
Goodwill	$ 400,000	$ 400,000	

Net Assets—marked up 300,000 ($800,000 fair value – $500,000 book value)
Goodwill—$400,000 ($1,200,000 – $800,000)

(b)

Value Analysis Schedule	Company Implied Fair Value	Parent Price (80%)	NCI Value (20%)
Company fair value	$1,200,000	$960,000	$240,000
Fair value of net assets excluding goodwill	800,000	640,000	160,000
Goodwill	$ 400,000	$320,000	$ 80,000

Net Assets—marked up $300,000 ($800,000 fair value – $500,000 book value)
Goodwill—$400,000 ($1,200,000 – $800,000)
The NCI would be valued at $240,000 (20% of the implied company value) to allow the full recognition of fair values.

4. (a)

Value Analysis Schedule	Company Implied Fair Value	Parent Price (100%)	NCI Value (0%)
Company fair value	$1,000,000	$1,000,000	N/A
Fair value of net assets excluding goodwill	850,000	850,000	
Goodwill	$ 150,000	$ 150,000	

The determination and distribution of excess schedule would make the following adjustments:

$1,000,000 price – $350,000 net book value = $650,000 excess to be allocated as follows:

Current assets	$ 50,000
Fixed assets	450,000
Goodwill	150,000
	$650,000

(b)

Value Analysis Schedule	Company Implied Fair Value	Parent Price (100%)	NCI Value (0%)

Fair value of net assets excluding goodwill	850,000	850,000	
Gain on acquisition	$ (350,000)	$ (350,000)	

The determination and distribution of excess schedule would make the following adjustments:

$500,000 price – $350,000 net book value = $150,000 excess to be allocated as follows:

Current assets	$ 50,000
Fixed assets	450,000
Gain on acquisition	(350,000)
	$ 150,000

5. (a)

Value Analysis Schedule	Company Implied Fair Value	Parent Price (80%)	NCI Value (20%)
Company fair value	$1,000,000*	$800,000	$200,000
Fair value of net assets excluding goodwill	850,000	680,000	170,000
Goodwill	$ 150,000	$120,000	$ 30,000

*$800,000/80% = $1,000,000.

The determination and distribution of excess schedule would make the following adjustments:

$800,000 parent's price – (80% × $350,000 net book value)	$520,000	
NCI adjustment, $200,000 – (20% × $350,000 net book value)	130,000	
Total adjustment to be allocated	$650,000	as follows:
Current assets	$ 50,000	
Fixed assets	450,000	
Goodwill	150,000	
	$650,000

Fair value of net assets excluding goodwill	850,000	680,000	170,000
Gain on acquisition	$ (80,000)	$ (80,000)	N/A

*Cannot be less than the NCI share of the fair value of net assets excluding goodwill.
**$600,000 parent price + $170,000 minimum allowable for NCI = $770,000.

$600,000 parent's price – (80% × $350,000 book value)	$320,000	
NCI adjustment, $170,000 – (20% × $350,000 net book value)	100,000	
Total adjustment to be allocated	$420,000	as follows:
Current assets	$ 50,000	
Fixed assets	450,000	
Gain on acquisition	(80,000)	
	$420,000	

6.

Value Analysis Schedule	Company Implied Fair Value	Parent Price (80%)	NCI Value (20%)
Company fair value	$1,000,000*	$800,000	$200,000
Fair value of net assets excluding goodwill	850,000	680,000	170,000
Goodwill	$ 150,000	$120,000	$ 30,000

*$800,000/80% = $1,000,000

The NCI will be valued at $200,000, which is 20% of the implied company value. The NCI account will be displayed on the consolidated balance sheet as a subdivision of equity. It is shown as a total, not broken down into par, paid-in capital in excess of par, and retained earnings.

Eliminations and Adjustments:

(EL) Eliminate investment account and the equity recorded at the time of acquisition.

(D) Distribute the excess applicable to the investment and the adjustment to fair value for the NCI as follows:

(D1) Increase building, $100,000.

(D2) Increased equipment, $20,000.

(D3) Record goodwill, $5,000.

(TR) Transfer paid-in equity of Unknown Company and retained earnings of Famous Company to paid-in capital of Famous Company. $260,000 total, $6,000 assigned to par value, and balance to paid-in excess.

CASE

CASE 2-1

(1) Evaluation of price—Fair value of Al's Hardware:

Cash	$180,000		
Accounts receivable	350,000		
Inventory	600,000		
Land	100,000		
Building	300,000		
Equipment	100,000		
Current liabilities	(425,000)		
Mortgage	(600,000)		
Lawsuit	(300,000)		
	$305,000	× 60%	= $183,000
Value given	7,500	× $40	= $300,000

This purchase would not be a bargain, because comparing the fair values (including the lawsuit) to the price would result in goodwill of $117,000 ($300,000 – $183,000).
Note: This analysis would have the same result if done for only 60% interest in the form of the D&D schedule with the same result.

(2) Accounting methods:

(a) GAAP would require that many of the adjustments to recognize fair values must be made directly on Al's books before consolidation:
Adjust accounts receivable to net realizable value.
Decrease inventory to fair value.
Record estimated liability from lawsuit.

(b) There are no major differences between fair and book values of the long-lived assets. Normally, they would not be adjusted to fair value, but this could be done under quasi-reorganization or push-down accounting. The recommendation would be that they be adjusted to fair value to improve future reporting. Noncontrolling interest would have to agree to it as well.

(c) The goodwill on Al's books should be written off because there is no reason to think it exists.

(d) Al's Hardware is a likely candidate for quasi-reorganization, because this procedure adjusts all assets to fair values and decreases paid-in capital in excess of par to provide the amount needed to cover the negative balance in retained earnings.

Summary: Accounts receivable, inventory, estimated liability, and goodwill should be adjusted on the subsidiary's books. The adjustments of long-lived assets could be done on the subsidiary's books under push-down accounting. If the long-lived assets are not adjusted on the subsidiary books, the adjustment relative to the controlling interest would be made in the consolidation process.
