Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

SKU: 9781305878099-SOLUTIONS

Excel 2016 Module 2: Working with Formulas and Functions

A Guide to this Instructor's Manual:
We have designed this Instructor's Manual to supplement and enhance your teaching experience through classroom activities and a cohesive module summary.

This document is organized chronologically, using the same heading in **blue** that you see in the textbook. Under each heading you will find (in order): Lecture Notes that summarize the section, Teacher Tips, Classroom Activities, and Lab Activities. Pay special attention to teaching tips, and activities geared towards quizzing your students, enhancing their critical thinking skills, and encouraging experimentation within the software.

In addition to this Instructor's Manual, our Instructor's Resources Site also contains PowerPoint Presentations, Test Banks, and other supplements to aid in your teaching experience.

Table of Contents

Module Objectives	2
Excel 26: Create a Complex Formula	2
Excel 28: Insert a Function	3
Excel 30: Type a Function	5
Excel 32: Copy and Move Cell Entries	6
Excel 34: Understand Relative and Absolute Cell References	8
Excel 36: Copy Formulas with Relative Cell References	9
Excel 38: Copy Formulas with Absolute Cell References	11
Excel 40: Round a Value with a Function	12
End of Module Material	13

Module Objectives

Students will have mastered the material in Excel Module 2 when they can:

- Create a complex formula
- Insert a function
- Type a function
- Copy and move cell entries
- Understand relative and absolute cell references
- Copy formulas with relative cell references
- Copy formulas with absolute cell references
- Round a value with a function

Excel 26: Create a Complex Formula

LEARNING OUTCOMES

- Create a complex formula by pointing
- Use the fill handle and Auto Fill

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

LECTURE NOTES

- Define a complex formula.
- Demonstrate how to create a complex formula.
- Explain the order of precedence used by Excel to determine which operation to perform first in a complex formula.
- Discuss how you can change the order of precedence in a formula by using parentheses.

TEACHER TIP
The concept of percentages can be difficult for some students to grasp. Remind students that 20% can be expressed as 0.2 or .2, but is not the same as 20. To illustrate this, draw a circle on the board and divide it into fifths. Point out that one fifth is 20% and is what you get if you multiply 1 by 20% or .2. Draw 20 circles to show what the answer would be if 1 was multiplied by 20.

TEACHER TIP
Point out that to increase a number by a specific percent that number needs to be multiplied by the percent value, which is then added to the original number. To demonstrate this, take 100 and multiply it by 20% and then add the resulting value (20) to 100 to get 120. Note that 120 is the result when 100 is increased by 20%.

CLASSROOM ACTIVITIES

1. Group Activity: Explore the effect of parentheses by presenting an expression, such as 3 * 4 ^ 2 - 12 / 2 + 1, evaluating it using the order of operations (43), then adding parentheses in one or more places, such as (3 * 4) ^ 2 - 12 / (2 + 1), and reevaluating the expression (140). Note how the result changes.

2. Quick Quiz:
    1. True or False: You can change the order of precedence in a formula by using brackets. (Answer: False)
    2. In the formula 218-44/815*9, which operation will be performed first? (Answer: Division)

Excel 28: Insert a Function

LEARNING OUTCOMES

- Use the Insert Function button
- Select a range for use in a function
- Select a function from the AutoSum list arrow

LECTURE NOTES

- Define functions.
- Point out that you can use the Insert Function button on the formula bar to choose a function from a dialog box.
- Discuss how you can click the Sum button list arrow to enter some frequently used functions, such as AVERAGE.
- Mention that you can insert a function on its own, or as part of another formula. Point out that when using a function alone, it always begins with the formula prefix = (the equal sign).

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

- Demonstrate how to use the AVERAGE function.
- Use FIGURES 2-3 and 2-4 to point out the different parts of the Insert Function dialog box and the Function Arguments dialog box, respectively.
- Demonstrate how to use the Fill button to copy a formula to other cells.

TEACHER TIP
Remind students that the range of cells to average does not include the total in cell B12. Point out that an incorrect value would be calculated by the Average function in cell B15 if the total was included.

TEACHER TIP
While the range B15:E15 is selected, direct the students' attention to Average, Count, and Sum data on the status bar. Discuss how this feature allows users to quickly see those values without adding them to the spreadsheet.

TEACHER TIP
Using the Collapse and Expand buttons of the Insert Function dialog box can seem confusing to students who have never used this dialog box. Make sure to demonstrate how to use these buttons using a number of examples, and also explain how these buttons make it much easier to enter the arguments of a function.

CLASSROOM ACTIVITIES

1. Class Discussion: Ask students why some functions are available from the Sum list arrow on the Home tab and how they might use those functions.

2. Quick Quiz:
    1. You can use the _____ button on the formula bar to choose a function from a dialog box. (Answer: Insert Function)
    2. If you use a function alone, it always begins with the _____ sign. (Answer: equal)

LAB ACTIVITIES

1. As mentioned in this lesson, there are many categories of functions, including Financial, Date & Time, and Statistical. The Insert Function dialog box is useful not only for entering functions, but also for finding out more about the various functions available in Excel. Ask students to choose one of these categories and then to use the Insert Function dialog box to explore three functions within that category. Ask students to write down the names of the three functions, their descriptions, and their structures.

2. The AVERAGE function behaves differently depending on whether there is a blank in a cell range or a zero. Have students use Help to answer the following questions: What is the maximum number of cells that you can average? (Answer: 255). What does the AVERAGE function actually measure? (Answer: central tendency). If there is a blank in a cell within the range being averaged, is it converted to a zero? (Answer: No, it is not included in the average).

Excel 30: Type a Function

LEARNING OUTCOMES

- Select a function by typing
- Use AutoComplete to copy formulas

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

LECTURE NOTES

- Point out that in addition to using the Insert Function dialog box or the Sum button on the Ribbon to enter functions, you can also type the function directly into a cell and complete the arguments needed.
- Explain how the AutoComplete feature makes it easy to enter function names.
- Demonstrate how to manually enter the MAX and MIN functions.
- In FIGURE 2-6, point out the ScreenTip that appears beneath the cell to help you complete the function.

TEACHER TIP
Again, remind students to select the correct range (B4:B11) to find the maximum and minimum values.

TEACHER TIP
Point out that the parenthesis does not need to be typed. After the function range is selected, pressing the [Enter] key closes the parenthesis, enters the function, and moves the active cell down one row.

CLASSROOM ACTIVITIES

1. Quick Quiz:
    1. When manually entering a function, you always begin with a(n) _____ sign. (Answer: equal).
    2. True or False: When manually entering a function, you must know the exact spelling of the function. (Answer: False)

2. Class Discussion: Brainstorm situations in which it would be useful to use COUNT and COUNTA functions.

3. Critical Thinking: Sometimes, it is just as easy to scan a list and pick out the highest value as it is to use the MAX function. Consider various numerical lists, such as a list of the ages of family members, a list of class grades, a list of stock prices, a list of the areas of states, a list of city populations, and so on. When would it make more sense to use the MAX function than simply to scan the list to determine the highest value? Why? Does the answer depend on the amount of data, the type of data, or both? Why?

Excel 32: Copy and Move Cell Entries

LEARNING OUTCOMES

- Copy a range to the Clipboard
- Paste a Clipboard entry
- Empty cell contents
- Copy cell contents

LECTURE NOTES

- Discuss the different methods for copying or moving cells and ranges (or the contents within them) from one location to another: Cut, Copy, and Paste buttons; the fill handle in the lower-right corner of the active cell; or the drag-and-drop feature.
- Define the Office Clipboard.

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

- Point out the Clipboard launcher and the Office Clipboard pane in FIGURE 2-9.
- Demonstrate how to copy the contents of a range from one location to another using the Copy and Paste buttons.
- Demonstrate how to copy cell contents using the drag-and-drop method.

TEACHER TIP
Remind students of the importance of having the correct pointer. Refer students back to TABLE 1-3.

TEACHER TIP
Explain that another way to create a formula that increases a value by a certain percentage is to multiply by the value one and the decimal equivalent of the percent. For example, in cell B21, to calculate a 30% increase over the value in cell B12 using the formula =B12*1.3 is equivalent to =B12+B12*.3 and =B12+B12*30%.

TEACHER TIP
The Cut, Copy, and Paste buttons and the drag-and-drop feature are found in many other programs in addition to Excel. Ask students if they have come across these features in other Office programs. If yes, in which programs? Do these features work exactly the same in Excel as in the other programs?

CLASSROOM ACTIVITIES

1. Quick Quiz:
    1. The _____ is a temporary storage area that holds the selections you copy or cut. (Answer: Office Clipboard or Clipboard)
    2. When pasting a range from the Clipboard into the worksheet, you only need to specify the _____ cell of the range where you want to paste the selection. (Answer: upper-left)
    3. True or False: The Clipboard can contain a maximum of 24 items. (Answer: True)

2. Class Discussion: Ask students to name the different ways you can copy cell contents. Then ask them to identify their favorite method and explain their choice.

LAB ACTIVITY
Ask students to create a new worksheet with data of their choice. Have them use the Cut button to move the contents of a range from one location to another, and ask them to note what happens to the contents of the original cells.

Excel 34: Understand Relative and Absolute Cell References

LEARNING OUTCOMES

- Identify cell referencing
- Identify when to use absolute or relative cell references

LECTURE NOTES

- Define relative cell references and absolute cell references.
- Explain when relative cell references are used. Be sure to point out that when a formula containing a relative cell reference is copied to a new location, the cell reference will change as it is applied to the new location or *relative* to the new location.

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

- Explain when absolute cell references are used. Be sure to point out that when a formula containing an absolute cell reference is copied to a new location, the cell reference does not change.

TEACHER TIP
Relative and absolute cell addressing are difficult concepts for students to grasp but it is this concept that makes electronic spreadsheets so powerful. Explain that if you have a formula in cell A3 that references cells A1 and A2, when you copy the formula in cell A3 to cell D3, your copy the addresses relative to original formula location. Cell D3 is three columns to the right so the addresses in the formula will also move three columns to the right (D1 and D2).

CLASSROOM ACTIVITIES

1. Class Discussion: Display FIGURE 2-13 for the class on a projection screen. Ask students to explain the different formulas used in the worksheet, including the type of cell referencing used. Use this same figure and ask them how many actual formulas were entered.

2. Quick Quiz:
    1. _____ cell references are the default in Excel. (Answer: Relative)
    2. Which sign do you use to create an absolute cell reference? (Answer: $, the dollar sign)

Excel 36: Copy Formulas with Relative Cell References

LEARNING OUTCOMES

- Copy and Paste formulas with relative cell references
- Examine Auto Fill and Paste options
- Use the Fill button

LECTURE NOTES

- Discuss the advantages of copying formulas rather than retyping them.
- Mention that you can use the Copy and Paste commands or the fill handle to copy formulas.
- Demonstrate how to copy formulas with relative cell references using the Copy and Paste buttons.
- Explain the Auto Fill option.
- Demonstrate how to copy a formula using the fill handle.
- Point out the Auto Fill Options button in FIGURE 2-14 and discuss the options that it provides.
- Point out the Paste Options button in FIGURE 2-15 and discuss the options that it provides.
- Demonstrate how to use the Fill button list arrow, which is shown in FIGURE 2-16.

TEACHER TIP
By default, cell formulas use relative cell reference. This means that if the cells you are copying contain relative cell references and you want to maintain the relative referencing, then you don't need to make any changes to the cells before copying them.

CLASSROOM ACTIVITIES

1. Quick Quiz:
    1. You can drag the _____ in a cell to copy cells or to continue a series of data based on previous cells. (Answer: fill handle)

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

2. Critical Thinking: Excel updates relative references when formulas are copied. Can Excel ever be "too smart"? Could updating relative references when formulas are copied ever produce the wrong result? When?

LAB ACTIVITY
The fill handle can be used to complete a sequential series of numbers or labels. These series can include: the months in the year, days of the week, and sequential numbers. Allow students to form groups of 3 or 4, and then have them create sample sequences of both numbers and labels using the fill handle. Ask them to think about how this feature can improve efficiency and eliminate errors and misspellings.

Excel 38: Copy Formulas with Absolute Cell References

LEARNING OUTCOMES
- Create an absolute cell reference
- Use the fill handle to copy absolute cell references

LECTURE NOTES
- Make sure that students understand that to preserve a specific cell address when a formula is copied, you need to apply an absolute cell reference before copying the formula.
- Use FIGURE 2-17 to show the incorrect values that can result from relative referencing in copied formulas that should have absolute references.
- Demonstrate how to create absolute cell references.

TEACHER TIP
Point out that before students copy or move a formula, they should determine whether or not the formula needs any absolute cell references, and they should add the absolute references, if needed. Otherwise, they will get incorrect results, as shown in FIGURE 2-17.

TEACHER TIP
Make sure students know that they can add absolute cell reference when creating a formula by either typing the $ in front of the column letter and row number or by typing the cell address and then immediately pressing the [F4] key. An absolute cell reference does not need to be added after the formula is created, but it can be added if necessary.

CLASSROOM ACTIVITIES
1. Quick Quiz:
   1. When you press the _____ key, dollar signs are inserted in the cell address. (Answer: F4)
   2. When you press the _____ key, the range finder outlines the arguments of the equation in blue and red. (Answer: F2)
   3. True or False: To preserve a specific cell address when a formula is copied, you need to apply an absolute cell reference before copying the formula. (Answer: True)

2. Critical Thinking: Think about what would happen if the default in Excel was absolute cell references, rather than relative cell references. Would it be easier to create most worksheets? Why or why not?

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

3. Critical Thinking: In Figure 2-18, the change factor is entered as a value in cell G2 and the absolute cell address G2 is used in the What if formula. What are the advantages of using an absolute reference rather than the actual value in the What if formula?

Excel 40: Round a Value with a Function

LEARNING OUTCOMES

- Use Formula AutoComplete to insert a function
- Copy an edited formula

LECTURE NOTES

- Demonstrate how to edit a cell so that it includes the ROUND function.
- Demonstrate how to copy the edited formula into other formulas.

TEACHER TIP
Explain that without using the ROUND function sometimes Excel appears to perform incorrect calculations. Excel calculates values out to more decimal places than are normally displayed and unless the ROUND function is used, all decimal places are used in calculations, even if they are not displayed. For example, if cell B2 contains the value 1 and cell B3 contains 3 and you create the formula =B2/B3 in cell B4 and the result is displayed as 0.333333. If in cell B5 you enter the formula =B4*3 the resulting value displayed is 1 instead of 0.999999.

CLASSROOM ACTIVITIES

1. Class Discussion: Ask students to discuss some other examples in which it would be appropriate to use the ROUND function.

2. Quick Quiz:
    1. When you begin typing "RO" after the equal sign, the _____ feature displays a list of functions beginning with "RO". (Answer: AutoComplete)
    2. True or False: A calculated value must have at least one number after the decimal. (Answer: False)
    3. _____ are predesigned workbook files. (Answer: templates)

LAB ACTIVITY
Ask students to apply the ROUND function to all the cells in the range B14:E17 so that all the cells display exactly two digits after the decimal point. Students should print the resulting worksheet but NOT save their changes.

End of Module Material

- **Concepts Reviews** consist of multiple choice, matching, and screen identification questions.
- **Skills Reviews** provide additional hands-on, step-by-step reinforcement.
- **Independent Challenges** are case projects requiring critical thinking and application of the module skills. The Independent Challenges increase in difficulty, with the first one in each module being the easiest. Independent Challenges 2 and 3 become increasingly open-ended, requiring more independent problem solving.

© 2017 Cengage Learning. All rights reserved. May not be copied, scanned, or duplicated, in whole or in part, except for use as permitted in a license distributed with a certain product or service or otherwise on a password-protected website for classroom use.

Illustrated Microsoft Office 365 and Excel 2016 Intermediate 1st edition Reding Solutions Manual

- **Independent Challenge 4: Explore** contains practical exercises to help students with their everyday lives by focusing on important and useful essential skills, including creating photo montages for scrapbooks and photo albums, retouching and color-correcting family photos, applying layer styles and getting Help online.
- **Visual Workshops** are practical, self-graded capstone projects that require independent problem solving.

Independent Challenges

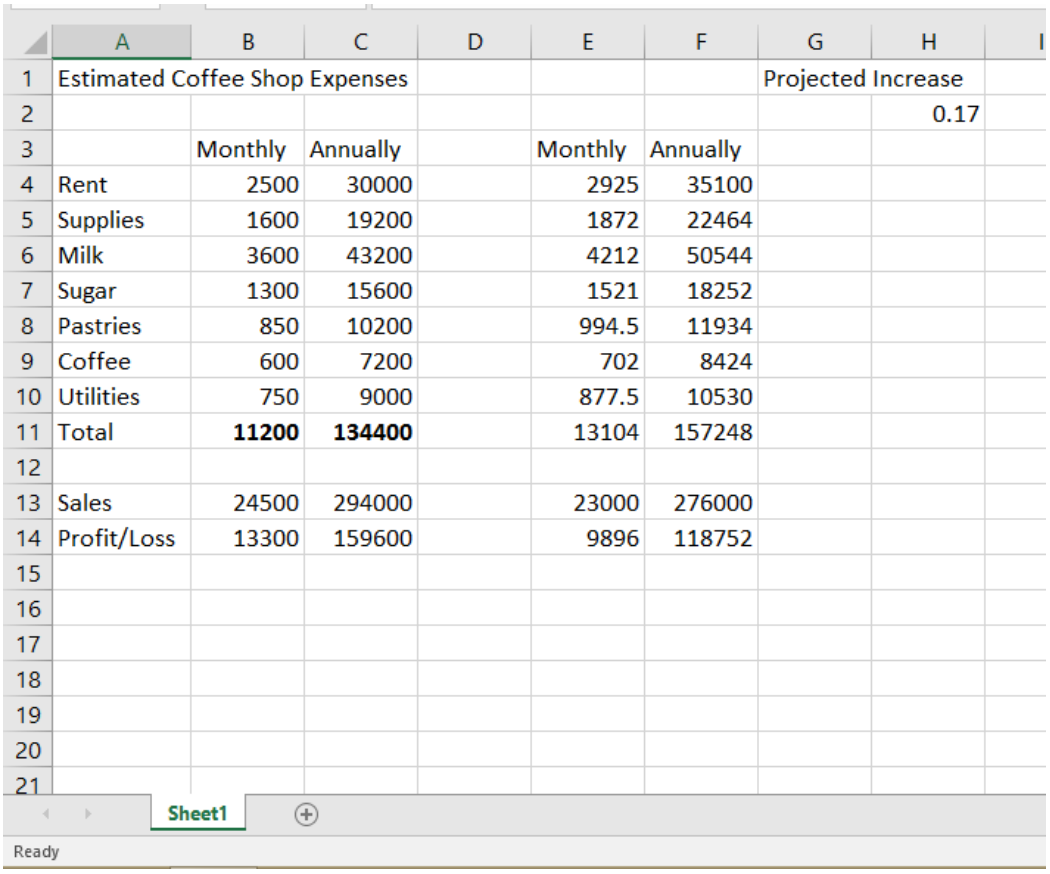

Because students may tackle the independent challenges in different ways, it is important to stress that there is not just one correct solution. What follows are examples of a possible solution for each of the Independent Challenges.

Independent Challenge 1

Students create a spreadsheet to track monthly expenses for a local coffee shop.

Estimated completion time: 20 minutes

Filename: EX 2-Coffee Shop Expenses.xlsx

	A	B	C	D	E	F	G	H	I
1	Estimated Coffee Shop Expenses						Projected Increase		
2								0.17
