65. A bound control showing mutually exclusive field entries
ANSWER: b
POINTS: 1

66. One choice within an option group
ANSWER: f
POINTS: 1

Subjective Short Answer

67. Explain why a text box rather than a combo box is the best choice for FName and LName data fields in a Customers table.

ANSWER:	There are endless possibilities for the FName and LName entry for every record. Therefore, a text box is a better choice rather than attempting to give the user a list of choices in the drop-down portion of a combo box.
POINTS:	1

69. Explain the benefits of using a subform for Sales data associated with individual customers.

ANSWER:	Benefits of using a subform are that you can show how “many” records (in this case sales records) are related to the “one” record in the main form (in this case customer records).

Essay

72. Give two reasons why a combo box control is more popular than a list box control for data entry.
ANSWER: A combo box allows the user to enter a new value into the control unless the Limit to List property is set to yes. Also, the combo box provides a “drop-down” action when the user clicks the list arrow.

74. Explain the relationship between the option group and option button controls.
ANSWER: An option group is a bound control that works well when a field has a limited number of values.
Option buttons are placed within the option group and determine the value placed in the field. One option button exists for each possible entry.
When the user clicks an option button in the option group, the numeric value associated with that option button is entered into the field bound to the option group.
