A : MSADC
B : MDAC
C : MDSQL
D : RDS

Correct Answer : D

6 : Which vulnerability is present in some servers and can be exploited by hackers in the browser address window and cause commands to be run on the server?
A : malformed URL
B : URL injection
C : Unicode directory traversal
D : folder browsing

Correct Answer : C

7 : What is a package containing one or more files that address a flaw in a platform?
A : service pack
B : hotfix
C : upgrade
D : rollback

Correct Answer : B

8 : Which of the following is a schedule that directs the routine application of patches and updates to systems?
A : patch cycle
B : upgrade schedule
C : revision change
D : version plan

Correct Answer : A

9 : Which tool is an automated vulnerability scanning application that scans for the presence of exploitable files on remote Web servers?
A : HFNetChk
B : CacheRight
C : Whisker
D : N-Stalker

Correct Answer : C

10 : Which of the following is a technique to increase web werver security?
A : Disable directory browsing
B : Enable remote administration
C : Disable failed logon attempts
D : Enable all Windows services

Correct Answer : A
