SKU: 9781319255343-TEST-BANK

Name:_____ Class:_____ Date:_____

Chapter 01: Introduction to Physics

1. Which of the following is a fundamental unit of the SI system of units?
   a. kilometer
   b. joule
   c. kilogram
   d. gram
   e. newton

ANSWER: c

2. The SI unit for mass is
   a. μg.
   b. mg.
   c. g.
   d. kg.
   e. lb.

ANSWER: d

3. The prefix "giga" stands for _____.
   a. 10^{12}
   b. 10^{6}
   c. 10^{3}
   d. 10^{9}
   e. 10^{15}

ANSWER: d

4. Which of the following is NOT one of the fundamental physical quantities in the SI system?
   a. mass
   b. length
   c. force
   d. time

ANSWER: c

5. The prefix "mega" means _____.
   a. 10^{2}
   b. 10^{9}
   c. 10^{-3}
   d. 10^{6}
   e. 10^{-6}

ANSWER: d

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

6. The prefix "pico" means _____.
   a. 10^{-12}
   b. 10^{-6}
   c. 10^{-3}
   d. 10^{6}
   e. 10^{9}

ANSWER: a

7. The prefix "micro" means _____.
   a. 10^{-12}
   b. 10^{-6}
   c. 10^{-3}
   d. 10^{-2}
   e. 10^{-1}

ANSWER: b

8. The prefix "milli" means _____.
   a. 10^{-12}
   b. 10^{-6}
   c. 10^{-3}
   d. 10^{-2}
   e. 10^{-1}

ANSWER: c

9. The prefix "centi" means _____.
   a. 10^{-12}
   b. 10^{-6}
   c. 10^{-3}
   d. 10^{-2}
   e. 10^{-1}

ANSWER: d

10. The prefix "kilo" means _____.
   a. 10^{-12}
   b. 10^{-6}
   c. 10^{-3}

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

d. 10^3

e. 10^1

ANSWER: d

11. The prefix "nano" means _____.

a. 10^{-12}

b. 10^{-6}

c. 10^{-3}

d. 10^{-2}

e. 10^{-9}

ANSWER: e

12. Which of the following prefixes does NOT represent a fractional part of a whole unit?

a. nano

b. micro

c. kilo

d. milli

e. deci

ANSWER: c

13. Which of the following prefixes does NOT represent a quantity larger than a single unit?

a. kilo

b. mega

c. giga

d. tera

e. femto

ANSWER: e

14. Which of the following is NOT one of the fundamental units in the SI system?

a. Newton

b. meter

c. kilogram

d. second

ANSWER: a

15. The fundamental physical quantities are

a. mass, length, time, temperature, amount of a substance, current, and luminous intensity.

b. weight, length, time, temperature, amount of a substance, current, and luminous intensity.

c. mass, length, time, temperature, force, current, and luminous intensity.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

d. mass, length, time, force, momentum, amount of a substance, and current.
e. weight, length, time, temperature, amount of a substance, potential energy, and luminous intensity.

ANSWER: a

16. The density of seawater was measured to be 1.07 g/cm^3. This density in common SI units is _____.
a. 1.07×10^{-3} kg/m^3
b. $(1/1.07) \times 10^3$ kg/m^3
c. 1.07×10^3 kg
d. 1.07×10^{-3} kg
e. 1.07×10^3 kg/m^3

ANSWER: e

17. To convert a quantity from km/h to m/s, you must
a. multiply by 1000 and divide by 60.
b. multiply by 1000 and divide by 3600.
c. multiply by 60 and divide by 1000.
d. multiply by 3600 and divide by 1000.

ANSWER: b

18. To convert a quantity from m/s to km/h, you must
a. multiply by 1000 and divide by 60.
b. multiply by 1000 and divide by 3600.
c. multiply by 60 and divide by 1000.
d. multiply by 3600 and divide by 1000.

ANSWER: d

19. To convert a quantity from km/(h · s) to m/s^2, you must
a. multiply by 1000 and divide by 60.
b. multiply by 1000 and divide by 3600.
c. multiply by 60 and divide by 1000.
d. multiply by 3600 and divide by 1000.

ANSWER: b

20. To convert a quantity from g/cm^3 to kg/m^3, you must
a. multiply by 0.01.
b. multiply by 100.
c. multiply by 1000.
d. multiply by 0.001.
e. multiply by 1,000,000.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

ANSWER: c

21. In doing a calculation, you arrive at an expression in which the numerator is in kilometers and the denominator is in meters per second. When the calculation is completed, the result will be in units of
   a. meters, if you divide by 1000.
   b. meters, if you multiply by 1000.
   c. seconds, if you divide by 1000.
   d. seconds, if you multiply by 1000.
   e. meters squared per second, if you multiply by 1000.

ANSWER: d

22. You are traveling at a speed of 80 km/h. Your speed in mph is approximately _____ .
   a. 30 mph
   b. 40 mph
   c. 50 mph
   d. 60 mph
   e. 70 mph

ANSWER: c

23. In doing a calculation, you end up with a fraction having m/s in the numerator and m/s^2 in the denominator. The result will have units of _____.
   a. m^2/s^3
   b. s^{-1}
   c. s^3/m^2
   d. s
   e. m/s

ANSWER: d

24. The density of an object equals its mass divided by its volume. The mass of Earth is 6×10^{24} kg and its radius is 4×10^3 miles. The mass of the Sun is 2×10^{33} g and its radius is 7×10^5 km. Determine the ratio of the Earth's density to that of the Sun.
   a. 4×10^{-1}
   b. 4×10^2
   c. 4×10^0
   d. 4×10^1

ANSWER: c

25. Evaluate:
$(4.0 \times 10^{-6})(3.0 \times 10^4)$

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

a. 12×10^{10}
b. 1.2×10^{-10}
c. 12×10^{-5}
d. 1.2×10^{-1}
e. 12×10^{-10}

ANSWER: d

26. Evaluate:

$$\frac{(2\pi \times 10^{3})(3.0 \times 10^{7})}{(4.2 \times 10^{5})^{2}}$$

a. 1.1×10^{5}
b. 1.7×10^{-4}
c. 3.6×10^{-8}
d. 4.5×10^{5}
e. 1.1

ANSWER: e

27. Compute:

$$\frac{(3 \times 10^{8})(8 \times 10^{4})}{(6 \times 10^{5})}$$

a. 1×10^{17}
b. 6×10^{7}
c. 6×10^{7}
d. 4×10^{7}

ANSWER: d

28. Compute:

$$\frac{(6.2 \times 10^{-4}) + (4.0 \times 10^{-5})}{(2.0 \times 10^{-3})}$$

a. 3.3×10^{-6}
b. 5.1×10^{6}
c. 5.1×10^{-12}
d. 3.3×10^{-1}

ANSWER: d

29. When we look up in the sky the Sun appears about as big as the moon; however, we know that the Sun is

Copyright Macmillan Learning. Powered by Cognero.

much further away. Given that the radius of the Sun is about 7×10^8 m and that the radius of the moon is about 2×10^6 m, calculate approximately the number of times the moon could fit inside the Sun.

a. 4×10^2

b. 4×10^6

c. 1×10^7

d. 1×10^5

e. 2×10^5

ANSWER: c

30. Compute:
$(12 \times 10^6 - 2 \times 10^7) / (-12 \times 10^7 + 7 \times 10^6)$

a. 7.1×10^{-2}

b. 7.0×10^6

c. 2.0×10^{-8}

d. -7.1×10^{-2}

e. 2×10^5

ANSWER: a

31. The SI unit for temperature is

a. Celsius [°C]

b. Fahrenheit [°F]

c. Kelvin [K]

d. Rankine [°R]

e. Newton [°N]

ANSWER: c

32. List the unit prefixes from the largest to the smallest.

a. milli – micro – nano – femto – pico

b. milli – micro – femto – pico – nano

c. milli – micro – pico – nano – femto

d. micro – milli – nano – pico – femto

e. milli – micro – nano – pico – femto

ANSWER: e

33. Table below shows fundamental quantities, their SI units and unit abbreviations. Fill in the missing entries.

Fundamental Quantities and Their SI Units

Quantity	Unit	Abbreviation
	second	

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

		m
mass		
temperature		
	ampere	
		mol

ANSWER: Suggested Answer:
Missing entries (from top-left, by row): time, s; length, meter; kilogram, kg; kelvin, K; (electric) current, A; amount of substance, mole

34. Which of the following *does not* result in a ratio of 1.0×10^6?
    a. $\frac{1.0\ \text{mm}}{1.0\ \text{nm}}$
    b. $\frac{10\ hm}{1.0\ \text{mm}}$
    c. $\frac{1.0\ Ym}{1.0\ Em}$
    d. $\frac{100\ \text{km}}{1.0\ dm}$
    e. $\frac{1.0\ \mu m}{1.0\ fm}$

ANSWER: e

35. The number of femtoseconds in a millisecond is
    a. 10^3.
    b. 10^6.
    c. 10^9.
    d. 10^{12}.
    e. 10^{15}.

ANSWER: d

36. The prefix "M" means
    a. micro.
    b. milli.
    c. mega.
    d. mole.

Copyright Macmillan Learning. Powered by Cognero.

e. multi.

ANSWER: c

37. Basketball player Stephen Curry is 1.90 m tall. When converted to feet (1 ft = 0.3048 m) and inches (1 in. = 0.0254 m), his height is closest to

a. 6 ft 3 in.

b. 6 ft 2 in.

c. 6 ft 23 in.

d. 7 ft 5 in.

e. 6 ft $^1/_4$ in.

ANSWER: a

38. Lebron James' height is 6' 8" (1' = 0.3048 m, 1" = 0.0254 m). Tallest player to ever play in NBA was Gheorghe Muresan, who is 231 cm tall. Determine the absolute difference between players height rounded to three significant figures.

a. 26.7 cm

b. 16.7 cm

c. 17.8 cm

d. 27.8 cm

e. 11.9 cm

ANSWER: d

39. When driving on a highway at 100 km/h, the distance the distracted driver covers during the 5 s it takes to read a text message is closest to

a. 5 m.

b. 10 m.

c. 50 m.

d. 100 m.

e. 500 m.

ANSWER: d

40. Average acceleration due to gravity is $g = 9.81\frac{m}{s^2}$. What is the value of the acceleration due to gravity in $\frac{km}{h^2}$?

a. $1.27 \times 10^5 \frac{km}{h^2}$

b. $7.60 \times 10^{-10} \frac{km}{h^2}$

c. $2.72 \frac{km}{h^2}$

d. $7.60 \times 10^{-7} \frac{km}{h^2}$

e. $35.3 \frac{km}{h^2}$

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

ANSWER: a

41. In 1849 Fizeau measured the speed of light to be 313,000 km/s with the error of 5000 km/s. The relative uncertainty (ratio of the error to the value) is
    a. 0.01.
    b. 0.02.
    c. 0.0160.
    d. 0.016.
    e. 60.

ANSWER: b

42. The spectrum of visible light covers wavelength between 450 nm and 700 nm. Which of the following properly expresses the wavelength range in proper scientific notation?
    a. $(450 \times 10^{-9} - 700 \times 10^{-9})$ m
    b. $(4.50 \times 10^{-7} - 7.00 \times 10^{-7})$ m
    c. $(0.450 \times 10^{-9} - 7.00 \times 10^{-9})$ m
    d. $(0.450 \times 10^{-6} - 0.700 \times 10^{-6})$ m
    e. (450 – 700) nm

ANSWER: b

43. The measurement 5.130×10^{-4} has _____ significant figures.
    a. two
    b. three
    c. one
    d. seven
    e. four

ANSWER: e

44. The measurement 23.0040 has _____ significant figures.
    a. six
    b. three
    c. five
    d. four
    e. two

ANSWER: a

45. The momentum of a body is defined to be the product of its mass and its velocity. If the mass of an air-track glider is known to be 225 g and its velocity is measured to be 3.1 cm/s, its momentum should be reported as
    a. 697.5 g · cm/s.
    b. 698 g · cm/s.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

c. 7.0×10^2 g · cm/s.

d. 6.98×10^2 g · cm/s.

e. 6.975×10^2 g · cm/s.

ANSWER: c

46. The net force acting on a body is defined to be the product of the mass of the body and its resultant acceleration. If the mass of a body is known to be 184 kg and its acceleration is measured to be 2.4 m/s^2, the resultant force should be reported as

a. 4.4×10^2 kg · m/s^2.

b. 441.6 kg · m/s^2.

c. 442 kg · m/s^2.

d. 4.416 kg · m/s^2.

e. 4.42×10^2 kg · m/s^2.

ANSWER: a

47. Which of the following represents a value of current measured to at least five significant figures?

a. 2.375×10^4 A

b. 0.00347 A

c. 3.0×10^5 A

d. 23.75×10^1 A

e. 50.300 A

ANSWER: e

48. The number of seconds in a month is of the order of

a. 10^3.

b. 10^8.

c. 10^5.

d. 10^{10}.

e. 10^6.

ANSWER: e

49. Earth's population, expressed as an order of magnitude, is closest to

a. 10^6.

b. 10^{10}.

c. 10^5.

d. 10^8.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

e. 10^7.

ANSWER: b

50. The chemical agent dioxin can be toxic or hazardous to humans in concentrations as small as one part per billion. If I am testing a soil sample that has a mass of 1.0 kg, how much dioxin would have to be present for me to label it toxic or hazardous?

a. a picogram
b. a kilogram
c. a microgram
d. a milligram
e. a nanogram

ANSWER: c

51. An impurity in a manufacturing process will cause a batch to be rejected if the impurity exceeds one part per million. What is the maximum amount of impurity that could be present if the batch contains 100 kg of the product?

a. 100 micrograms
b. 100 nanograms
c. 100 grams
d. 100 megagrams
e. 100 milligrams

ANSWER: e

52. What is the order of magnitude of the height of Earth's tallest mountain?

a. 10^8 m
b. 10^4 m
c. 10^6 m
d. 10^3 m
e. 10^5 m

ANSWER: b

53. One of the longest bridges on Earth is the Danyang-Kunshan Grand Bridge. The length of the bridge is on the order of

a. 10^3 m.
b. 10^4 m.
c. 10^5 m.
d. 10^6 m.
e. 10^7 m.

ANSWER: c

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

54. A person inhales about 1 *L* of air per breathe. Estimate the number of air molecules inhaled.
   a. 10^{10}.
   b. 10^{14}.
   c. 10^{18}.
   d. 10^{22}.
   e. 10^{26}.

ANSWER: d

55. Estimate the number of raindrops needed to fill a volume of 1m × 1m × 1cm.
   a. 10^{3}
   b. 10^{5}
   c. 10^{7}
   d. 10^{9}
   e. 10^{11}

ANSWER: c

56. Light travels at 3×10^{8} m/s, and it takes about 8 min for light from the sun to travel to Earth. Based on this, the order of magnitude of the distance from the sun to Earth is
   a. 10^{10} m.
   b. 10^{8} m.
   c. 10^{9} m.
   d. 10^{6} m.
   e. 10^{11} m.

ANSWER: e

57. The length of a proton is of the order of 10^{-15} m and the length of the visible universe is of the order of 10^{26} m. From this information you can conclude that
   a. the length of the universe is 26 orders of magnitude greater than that of the proton.
   b. the length of the universe is 41 orders of magnitude greater than that of the proton.
   c. the length of the proton is 11 orders of magnitude greater than that of the universe.
   d. the length of the universe is 15 orders of magnitude greater than that of the proton.
   e. the length of the proton is 15 orders of magnitude greater than that of the universe.

ANSWER: b

58. The mass of an electron is of the order of 10^{-30} kg and the mass of the universe is believed to be of the order of 10^{52} kg. From this information you can conclude that

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

a. the mass of Earth is 52 orders of magnitude greater than that of the electron.
b. the mass of Earth is 30 orders of magnitude greater than that of the electron.
c. the mass of the electron is 82 orders of magnitude greater than that of Earth.
d. the mass of Earth is 82 orders of magnitude greater than that of the electron.
e. the mass of the electron is 30 orders of magnitude greater than that of Earth.

ANSWER: d

59. Light travels at 3×10^8 m/s, and the size of a proton is about 1 fm. Calculate the order of magnitude for the time taken for light to pass across a proton.

a. 10^{-7} s
b. 10^{-8} s
c. 10^{-22} s
d. 10^{-24} s
e. 10^{+23} s

ANSWER: d

60. If Earth is approximately 4.5 billion years old, estimate the order of magnitude for the number of times it has rotated about its own axis. (Assume a constant rate of rotation.)

a. 10^9
b. 10^{10}
c. 10^{11}
d. 10^{12}
e. 10^{14}

ANSWER: d

61. If you have a music CD collection of about 150 discs, estimate the order of magnitude of the number of heartbeats you would have if you listened all the way through your collection.

a. 10^6
b. 10^8
c. 10^{10}
d. 10^4
e. 10^3

ANSWER: a

62. A diehard music lover still prefers to listen to his vinyl records, which rotate at 33.33 revolutions per minute. If he listens for an average of three hours per day, estimate the order of magnitude for the number of revolutions his turntable makes in a year.

a. 10^7

Copyright Macmillan Learning. Powered by Cognero.

Chapter 01: Introduction to Physics

b. 10^2

c. 10^6

d. 10^5

e. 10^4

ANSWER: c

63. The second is defined to be the amount of time required for a cesium atom to emit 9,192,631,770 cycles of radio waves. The number of significant digits in the quoted value is

a. 3.

b. 6.

c. 9.

d. 10.

ANSWER: d

64. Density of styrofoam is $0.0320 \frac{g}{cm^3}$. This number has

a. 1 significant digit.

b. 2 significant digits.

c. 3 significant digits.

d. 4 significant digits.

e. 5 significant digits.

ANSWER: c

65. When writing a number, all zeros to the right of the decimal point are significant figures.

a. True

b. False

ANSWER: b

66. When multiplying or dividing numbers, the result has the same numbers of significant figures as the input number with fewest significant figures.

a. True

b. False

ANSWER: a

67. When adding or subtracting numbers, the result should have the same number of digits to the right of the decimal point as the input number with the most digits to the right of the decimal point.

a. True

b. False

ANSWER: b

68. The dimensions of mass density are _____.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

Chapter 01: Introduction to Physics

a. $\frac{\text{mass} \times \text{distance}}{\text{time}}$

b. $\text{mass} \times (\text{distance})^3$

c. $\text{mass} \times (\text{distance})^2$

d. $\frac{\text{mass}}{\text{distance}}$

e. $\frac{\text{mass}}{(\text{distance})^3}$

ANSWER: e

69. The dimensions of two quantities MUST be identical if you are either _____ or _____ the quantities.

a. adding; multiplying

b. subtracting; dividing

c. multiplying; dividing

d. adding; subtracting

ANSWER: d

70. In the expression $F_{\text{net}} = ma$, m must have the dimensions _____.

a. $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$

b. mass

c. $\frac{\text{distance}}{(\text{time})^2}$

d. $\frac{\text{distance}}{\text{time}}$

e. $\frac{\text{mass} \times (\text{distance})^2}{(\text{time})^2}$

ANSWER: b

71. If K has dimensions of $\frac{\text{mass} \times (\text{distance})^2}{(\text{time})^2}$, the α in $K = \alpha mv^2$ must

a. have the dimensions $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$.

b. have the dimension mass.

c. have the dimensions $\frac{\text{distance}}{(\text{time})^2}$.

Copyright Macmillan Learning. Powered by Cognero.

College Physics 3rd edition Freedman Test Bank

d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.

e. be dimensionless.

ANSWER: e

72. If x and t represent distance and time, respectively, the C in $x = \frac{1}{2}Ct^2$ must

a. have the dimensions $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$.

b. have the dimensions mass.

c. have the dimensions $\frac{\text{distance}}{(\text{time})^2}$.

d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.

e. be dimensionless.

ANSWER: c

73. If v and t represent velocity and time, respectively, C_1 in $v = C_1 e^{-C_1 t}$ must

a. have the dimensions $\frac{\text{distance}}{\text{time}}$.

b. have the dimensions mass.

c. have the dimensions $\frac{\text{distance}}{(\text{time})^2}$.

d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.

e. be dimensionless.

ANSWER: a

74. If v and t represent velocity and time, respectively, C_2 in $v = C_1 e^{-C_1 t}$must

a. have the dimensions $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$.

b. have the dimension $(\text{time})^{-1}$.

c. have the dimensions $\frac{\text{distance}}{(\text{time})^2}$.

d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.

e. be dimensionless.

Copyright Macmillan Learning. Powered by Cognero.

Chapter 01: Introduction to Physics

ANSWER: b

75. If x and t represent position and time, respectively, the A in $x = A \cos(Bt)$ must
   a. have the dimensions $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$.
   b. have the dimensions mass.
   c. have the dimensions distance.
   d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.
   e. be dimensionless.

ANSWER: c

76. If x and t represent position and time, respectively, the B in $x = A \cos(Bt)$ must
   a. have the dimensions $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$.
   b. have the dimensions $(\text{time})^{-1}$.
   c. have the dimensions $\frac{\text{distance}}{(\text{time})^2}$.
   d. have the dimensions $\frac{(\text{distance})^2}{(\text{time})^2}$.
   e. be dimensionless.

ANSWER: b

77. In Newton's law of gravity the universal gravitational constant is $G = Fr^2/m_1m_2$, where F is the gravitational force between the two masses, m_1 and m_2, and r is the distance between them. What are the dimensions of G?
   a. $\frac{(\text{distance})^2 \times (\text{time})^2}{\text{mass}}$
   b. $\frac{(\text{mass})^3 \times (\text{distance})^3}{(\text{time})^2}$
   c. $\frac{(\text{distance})^2}{(\text{mass})^2 \times (\text{time})^2}$
   d. $\frac{(\text{distance})^3}{\text{mass} \times (\text{time})^2}$
   e. $\frac{\text{mass} \times (\text{time})^3}{(\text{distance})^3}$

Chapter 01: Introduction to Physics

78. The dimensions of energy, E, are $\frac{\text{mass} \times (\text{distance})^2}{(\text{time})^2}$. Using dimensional analyzes, E is the product of which two quantities?

a. Mass divided by time squared
b. Force times acceleration
c. Mass times acceleration
d. Force times distance
e. Force times time

ANSWER: d

79. Speed of sound in solids can be calculated using equation $v = \sqrt{\frac{Y}{\rho}}$. If ρ stands for density (with units of kg/m^3, constant Y must have dimensions of _____.

a. $\frac{\text{mass} \times (\text{time})^2}{\text{distance}}$
b. $\frac{\text{mass} \times \text{time}}{(\text{distance})^2}$
c. $\frac{\text{mass}}{\text{time} \times (\text{distance})^2}$
d. $\frac{\text{mass} \times \text{distance}}{(\text{time})^2}$
e. $\frac{\text{mass}}{\text{distance} \times (\text{time})^2}$

ANSWER: e

80. Electric current is defined as the amount of electric charge passing through a point in one second. Based on that definition, one can conclude that the units of the electric charge, coulomb, are equal to

a. $\frac{A}{s}$.
b. $\frac{s}{A}$.
c. $A \cdot s$.
d. $A \cdot s^2$.
e. $A^2 \cdot s$.

ANSWER: c

81. The amount of heat (Q) transferred during the thermal process can be calculated using equation $Q = MC_V\Delta T$. If m is *the amount* of the substance, ΔT is the change in temperature and Q has dimensions of

Chapter 01: Introduction to Physics

$\frac{\text{mass} \times (\text{distance})^2}{(\text{time})^2}$, the units of the constant C_v are

a. $\frac{\text{m}^2}{\text{K s}^2}$.

b. $\frac{\text{kg m}^2}{\text{mol K s}^2}$.

c. $\frac{\text{mol m}^2}{\text{kg K s}^2}$.

d. $\frac{\text{kg m}}{\text{mol K s}^2}$.

e. $\frac{\text{mol m}^2}{\text{kg K m}^2}$.
