53. Which is the best example of a multi-level analysis?
    a. Studying not only the members of the group but also the group's leader.
    b. Examining how different roles in the groups affect performance.
    c. Studying how a norm influences the group as well as each member.
    d. Studying how a group can function at an efficient level, but then move to an inefficient level.
    e. A study that examines an individual's thoughts, feelings, and actions.
