37. Creates and monitors lab policies for staff and provides a safe and secure workplace for staff and evidence
ANSWER: a
POINTS: 1

38. Identifies the number of hard disk types, such as SATA or SCSI, and the OS used to commit crimes
ANSWER: f
POINTS: 1

39. Provides accreditation of crime and forensics labs worldwide
ANSWER: e
POINTS: 1

40. One of the oldest professional digital forensics organizations
ANSWER: j
POINTS: 1

Subjective Short Answer

41. What are the duties of a lab manager?
ANSWER: The lab manager sets up the processes for managing cases and reviews them regularly. Besides performing general management tasks, such as promoting group consensus in decision making, maintaining fiscal responsibility for lab needs, and enforcing ethical standards among staff members, the lab manager plans updates for the lab, such as new hardware and software purchases.

The lab manager also establishes and promotes quality assurance processes for the lab's staff to follow, such as outlining what to do when a case arrives, logging evidence, specifying who can enter the lab, and establishing guidelines for filing reports. To ensure the lab's efficiency, the lab manager also sets reasonable production schedules for processing work.

42. Provide a brief explanation of how to plan a lab budget.
ANSWER: Lab costs can be broken down into monthly, quarterly, and annual expenses. The better you understand these expenses, the better you can delegate resources for each investigation. Using a spreadsheet program helps you keep track of past investigation expenses so that you can extrapolate expected future costs. Remember that expenses include purchasing computer hardware and software, renting facility space, and trained personnel. When creating a budget, start by estimating the number of cases your lab expects to examine and identifying the types of computers you're likely to examine, such as Windows PCs, Apple systems, or Linux workstations.

44. What are the minimum requirements for a computer investigation and forensics lab?
ANSWER: Small room with true floor-to-ceiling walls
Door access with a locking mechanism (limited to authorized users, including cleaning crews), which can be a regular key lock, combination lock, or an electronic lock capable of logging who accessed it
Secure container, such as a safe or heavy-duty file cabinet with a quality padlock that prevents drawers from opening
Visitor's log with legible entries listing all people who have accessed the lab and showing the date, time in, and time out

45. Illustrate a proper way of disposing materials on your computer investigation lab.
ANSWER: Maintain two separate trash containers, one to store items unrelated to an investigation, such as discarded CDs, and the other for sensitive material that requires special handling to make sure it's destroyed. Using separate trash containers maintains the integrity of criminal investigation processes and protects trade secrets and attorney-client privileged communications in a private company. Several commercially bonded firms specialize in disposing of sensitive materials, and you should hire one to help maintain the integrity of your investigations.

46. Give a brief explanation of a computer forensics lab auditing process.
ANSWER: To make sure security policies and practices are followed, conduct routine inspections to audit your lab and evidence storage containers. Audits should include, but aren't limited to, the following facility components and practices:
- Inspect the lab's ceiling, floor, roof, and exterior walls at least once a month, looking for anything unusual or new.
- Inspect doors to make sure they close and lock correctly.
- Check locks to see whether they need to be replaced or changed.
- Review visitor logs to see whether they're being used properly.
- Review log sheets for evidence containers to determine when they have been opened and closed.
- At the end of every workday, secure any evidence that's not being processed on a forensic workstation.

48. What peripheral devices should be stocked in your computer forensics lab?
ANSWER: In addition to workstations and software, all labs should have a wide assortment of cables and spare expansion slot cards. Consider stocking your forensics lab with the following peripheral devices:
* A digital camera capable of still and motion recording

Copyright Cengage Learning. Powered by Cognero.

Guide to Computer Forensics and Investigations 6th edition Nelson Test Bank

* Assorted antistatic bags
* An external CD/DVD drive
* 40-pin 18-inch and 36-inch IDE cables, both ATA-33 and ATA-100 or faster
* Ribbon cables for floppy disks
* Extra USB 3.0 or newer cables and SATA cards and associated cables
* Extra SCSI cards, preferably ultra-wide
* Graphics cards, both Peripheral Component Interconnect (PCI) and Accelerated Graphics Port (AGP)
* Assorted FireWire and USB adapters
* A variety of hard drives and USB drives (as many as you can afford and in as wide a variety as possible)
* At least two 2.5-inch adapters from notebook IDE hard drives to standard IDE/ATA drives, SATA drives, and so on
* Computer hand tools, such as Phillips and flathead screwdrivers, a socket wrench, any vendor-specific tools, a small flashlight, and an antistatic wrist strap

49. Discuss the use of a laptop PC as a forensic workstation.

ANSWER: Improvements in hardware technology offer more flexibility in digital forensics. You can now use a laptop system with USB 3.0 or SATA hard disks to create a lightweight, mobile forensic workstation. Improved throughput speeds of data transfer on laptops also make it easier to create images of suspect drives, especially in the field.

50. What are the questions you need to ask when planning the justification step of a business case?

ANSWER: Before you can start, you need to justify to the person controlling the budget the reason a lab is needed. This justification step requires asking the following questions:
* What type of digital investigation service is needed for your organization?
* Who are the potential customers for this service, and how will it be budgeted—as an internal operation (police department or company security department, for instance)—or an external operation (a for-profit business venture)?
* How will you advertise your services to customers?
* What time-management techniques will you use?
* Where will the initial and sustaining budget for business operations come from?
